CONTAINING LATEST REVISED OFFICIAL SURVEYS.

TWO SHILLINGS.

GEORGE SLATER & CO.,
BOOKSELLERS, STATIONERS, AND NEWS AGENTS,
BRISBANE AND IPSWICH.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY.

ESTABLISHED 1849.

FOR MUTUAL LIFE ASSURANCE, &c.

PRINCIPAL OFFICE:—NEW PITT STREET, SYDNEY.

DIRECTORS:

GEORGE KING, Esq., M.P., Chairman.

CHARLES NATHAN, Esq., F.R.C.S., Deputy Chairman.

SAMUEL LYONS, Esq.

EDWARD THOMAS BRILBY, Esq.

BOLTON MOLINEAUX, Esq.

JOHN FAIRFAX, Esq.

Actuary:—MORRICE A. BLACK, F.I.A.

VICTORIA BRANCH:

35 Queen Street, Melbourne.—NICHOLAS MAINE, Resident Secretary.

Agencies in all the Principal Towns throughout New South Wales, Victoria, Tasmania, Queensland and New Zealand.

Agents in London:—Messrs. HENRY S. KING & Co., 65 Cornhill.

This Office, established in 1849, has successfully passed through the ordeals to which all new Life Offices are exposed, and having completed the twenty-second year of its existence, has achieved a position rarely excelled in the history of Life Assurance.

The Annual Income of the Society exceeds £224,395.

The Realized Assets of the Society exceed £831,739.

Persons assuring with this office, share the whole Profits, and a Bonus is declared every fifth year. Members incur no liability of Partnership.

ADVANTAGES OFFERED.

Low Rates of Premium, with early participation in Profits.

Premiums may be paid Quarterly, Half-yearly, or in a Single Sum.

Assurances may be effected on a Single Life, Joint Lives, or Survivorship, to the extent of £3,000.

Annuities, Present, Deferred, and Reversionary, are granted on Equitable Terms.

Members may serve as Volunteers without extra Premiums.

Liberal conditions for Residence and Voyaging.

Assurers unable, or who find it inconvenient, to pay their Premiums as they fall due may, after a duration of three years, obtain a New Policy of smaller amount, of equitable value without further payment.

The Quinquennial Report, showing the Society's state and progress, Prospectuses, and Forms of Proposal, may be had, or will be sent, post free, on application at the Office, or to any of the Society's Agents.

By order of the Board,

ALEXANDER J. RALSTON, *General Secretary.*

AGENT AT BRISBANE:

ERNEST H. WEBB.

Royal Insurance Company

Head Offices: Royal Insurance Buildings,
Liverpool; and Lombard Street, London.

Security to Life Policy-Holders.

In order to obtain perfect accuracy:
& Directors have just had two separate
and independent Valuations made of
the Life Liabilities and Assets of the
Company: one by the Officers of the
Company; and the other by Mr. Sam^l. Brown,
one of the most experienced Actuaries
of the day: the results being:—

Value of Total Life Liabilities —	£ 1,005,571
Real Assets to meet these Liabilities	1272,343
plus in hand, beyond liabilities	<u>£ 266,666</u>

The Schedules have been prepared
in the exact form prescribed in the
'Life Companies' Act" 1870.

ROYAL INSURANCE COMPANY.

Head Offices:

Royal Insurance Buildings, North John St., Liverpool;

AND

Lombard Street, London.

INDEPENDENT VALUATION OF LIFE LIABILITIES.

The Directors have obtained an INDEPENDENT REPORT from Mr. SAMUEL BROWN, on the results of the Life Business for the Five Years ending 31st December, 1869, as follows:—

LIFE LIABILITIES and ASSETS on 31st December, 1869.

	Number.	Net Value of Liabilities.	Life Funds.	Surplus.
General Life Assurances, less Re- Assurances	14,292	£835,568	£1,085,524	£249,956
Children's Endowments	222	22,795	25,589	2,794
Annuities (Immediate & Deferred)	463	147,314	161,230	13,916
TOTAL	14,977	£1,005,677	£1,272,343	£266,666

NOTE.—The Valuation of the Life Policies has been made at 3 per cent. interest, and the NET PREMIUMS ONLY HAVE BEEN TAKEN, so that the loadings for future profits and expenses are entirely held in reserve, and not brought into the valuation.

The amount now dealt with is the Profit during the last Five Years on Life Policies, being £249,956. The proportion of Profit which falls to the Assured will provide a Reversionary Bonus of £7 10s. per cent. to be added to the original sum assured of every Participating Policy existing on 1st January, 1870, which had then been in force five entire years; and also to Participating Policies of shorter duration, a proportional Reversionary Addition for each entire year of their existence, provided they were effected previously to 1st January, 1868, and existing on 1st January, 1870.

The profits accrued on Annuities and Endowments are still kept in reserve, and allowed to accumulate.

FUNDS IN HAND.

Capital paid-up	£289,095 0 0
Reserve Fund, and Profit and Loss Account	280,363 14 5

FIRE—LIFE—ANNUITIES.

Extract from Auditors' Report.

Royal Insurance Office - Liverpool, 30th July, 1870.

We certify that we have carefully examined all the Books, Accounts, Vouchers for Payments, the Bank Book; and other Documents relating to the business of the Company for the year 1869. —

We have compared the Balance sheet signed by us, with the Books; and it represents the financial position of the Company's — affairs on the 31st December last. —

Every Security, consisting of Life Policies, Title Deeds, Bonds, Notes, Railway Shares and Government Stock held here, as stated in the Balance sheet, has been seen and examined by us.

Signed: — { Joseph Younghusband,
Christ: Atkinson, } Auditors.

Queensland Government SAVINGS BANK.

BRANCHES of the above Bank are now open at Banana, Beenleigh, Bowen, Brisbane, Bundaberg, Calliope, Cape River, Cardwell, Charleville, Clermont, Cleveland, Condamine, Curriwillingham, Dalby, Drayton, Gatton, Gayndah, Gilberton, Gladstone, Goodna, Goondiwindi, Gympie Creek, Ipswich, Jimna, Kilkivan, Leyburn, Mackay, Marlborough, Maryborough, Nanango, Nebo, Ravenswood, Rockhampton, Roma, Shipping Office—Brisbane, Springsure, St. George, St. Lawrence, Surat, Tambo, Taroom, Toowoomba, Townsville, Warwick, and Westwood.

Deposits, from 5s. upwards, can be made at any of the above Banks, during ordinary office hours, and on Saturday evenings
Interest at the rate of 5 per cent. per annum is allowed to Depositors.

Further information can be obtained by applying, either by letter or in person, at the Treasury, or at any of the above offices.

*The Treasury,
31st October, 1871.*

JOSHUA P. BELL.

GOVERNMENT LIFE INSURANCE AND ANNUITIES.

PROPOSALS for Life Insurance, or for the purchase of Annuities, or Monthly Allowances, can be received at any branch office of the Government Savings Bank, where all information can be obtained.

By a very moderate outlay any person may now make provision, by Insurance, for his widow and children after his death; or by the purchase of a Government Annuity, may provide for his wife and family, or for himself, in old age.

Thus, a man aged 25 may insure the sum of £50 at his death—

By the payment of Two Shillings monthly during his life;

Or, Eleven Shillings and Sixpence half-yearly;

Or, Six Shillings quarterly.

Or, he may insure £100 at death by double the above payment.

Annuities or Monthly Allowances may, in the same way, be purchased by or for any person above the age of ten years.

Thus, a man aged 30 may purchase an Annuity of £20, to be paid to him from the age of 55 until his death, by a yearly payment of £4 15s.

Or, he may secure a Monthly Allowance of £2 9s. 5d., equal to £29 13s. a year—to commence at 60—by payment of eight shillings a month.

*The Treasury,
31st October, 1871.*

JOSHUA P. BELL.

THE
BRISBANE COURIER,

Established in June, 1846, is published Daily in
Brisbane. Subscription—10s. per Quarter.

The *Courier*, is the only daily Paper published in Brisbane. It is the

BEST MEDIUM FOR ADVERTISERS,

is necessarily read by all business men, and is circulated over
all parts of Queensland.

MONTHLY SUMMARY

For England, published immediately before the departure of each mail,
and forwarded to any address for

5s. PER ANNUM, INCLUDING POSTAGE.

THE
QUEENSLANDER

HAS a larger circulation than any other four newspapers in the
Colony, the *Courier* alone excepted. It is PUBLISHED
EVERY SATURDAY MORNING, at the office in George Street,
and contains a full digest of the news of the week, for the use of that
large number of persons who are out of the reach of a daily paper.
The *Queenslander* is specially adapted for circulation among those
engaged in agricultural or pastoral pursuits. It contains full market
reports, and country news from all parts of the Colony.

Subscription—6s. 6d. per Quarter, or 21s. per annum, which must be
paid in advance in all cases,

RECIPE FOR PRESERVING PINEAPPLES.

Mr. W. Kirchuer, of Hamburg, writes to the Acclimatisation Society, enclosing the following recipe for preserving pineapples:—Take the pineapple when it is green yellowish—that is, about half ripe—peel it off quite clean, and then cut it in slices about a quarter of an inch thick; take of sugar the same weight as the fruit. Then put the slices in an earthen vessel, with sugar between, over night. In the morning they will be found swimming in their juice. This juice is drawn off and slowly boiled over a moderate fire, until it allows itself to be drawn into threads. Upon the proper boiling of the juice depends the preservation of the fruit. To try, therefore, the juice, pour some of it in a plate, let it cool, and when it pours off like treacle, it will do. All the slices are then put into the hot juice and left over the fire for fifteen minutes, but must not be allowed to boil again. Put to each pound of fruit one teaspoonful of brandy as soon as it comes off the fire. The slices are now taken out and dried on clean deals, and the juice also is allowed to cool. The slices are then put into bottles or glasses, which are only filled with them three-quarters full, in the remaining space the juice is poured. If the preserves are to be shipped for a long journey it would be safer to put them into hermetically closed tin canisters."

WARDE BROTHERS, WHOLESALE, RETAIL, FURNISHING AND GENERAL IRONMONGERS

Are in receipt of monthly shipments direct from English Manufacturers,
and are therefore able to compete with any house in Australia in their line.

23rd to 29th day	From 1 a.m. till daylight.	From 1 a.m. till daylight.

THE
TURKISH BATH,
ALBERT STREET, BRISBANE.

OPEN DAILY from NINE a.m. to SIX p.m.

ON TUESDAYS AND FRIDAYS

Open for Ladies from 9 a.m. to 1 p.m., and for Gentlemen from 2 p.m.

ALSO

SULPHUR, HOT, COLD, AND SHOWER BATHS.

E. LETHEM, Proprietor.

"The Turkish Bath is of still greater importance to the healthy than the sick, for to be kept well is better than to be cured, and a harmless, luxurious, invigorating, and life-prolonging recreation is better than all medicine. The Bath is to the individual man, comprising his liver, kidneys, and skin, what the sun is to the world and its inhabitants."—*Dr. Erasmus Wilson.*

HINTS TO FARMING SETTLERS.

SELECTION OF LAND.—In choosing a piece of land that shall be suitable for cultivation and ultimately become a homestead, the settler will do well to act with considerable caution, as on the choice depends, in a great measure, his and his family's welfare. The following conditions are essential:—That the situation be in close proximity to a good road, or some other channel by which the produce may be readily conveyed to the place of sale. This, one would think self-evident necessity, has frequently been lost sight of, and there are farms that in some weathers are all but inaccessible, and whence the expense of carriage will all but absorb the profits of the produce. Again, every precaution should be taken to ascertain if the land be flooded in winter, or subject to such a flow of water as cannot be overcome by reasonable labour; if so, rich as such land may be, it were better to at once reject it than run the speculative chance of having about one average crop one year, and three or four miserably meagre returns in the following years. A natural fall to the land is also a great advantage, as it materially helps its proper drainage.

SOIL.—Experience and the research of chemists have demonstrated that the soil from which the greatest results may be expected is that which is richest in humus or decayed vegetable matter; for the simple reason that it contains in greatest profusion the ingredients and constituents necessary to the formation of plants. The banks of rivers, and the flats of valleys at the base of mountains, have long been noted for their exceeding fertility. This soil has, however, occasionally the drawback before spoken of, and heavy and ruinous floods show at what risk the cultivation of such land has to be conducted. Better a poorer soil free from such drawbacks, for, if properly worked, the average returns exceed those of the richer yet more dangerous ground.

THE HOMESTEAD, &c.—Having selected and taken possession of a tract of land, the tedious and laborious work of clearing has to be performed. Prior to commencing this, the site of the future

homestead should be decided on. Choose a high part of your selection, in a central portion of the land, provided it be not too far distant from the Government road. Your next care should be the house. Experience has shown that a comfortable home is one of the greatest stimulants and incentives to perseverance that a settler can have. Weatherboard houses are generally found very serviceable, and will last for a considerable time. In some parts of the colony, very substantial houses are formed of a timber frame-work, the space between the studs being wickered or wattled with tea-tree, or other pliable saplings, which is covered over with plaster made of sand, clay, and lime. These structures are more economical than weatherboard, but take much time in their erection. If neither of these will suit the pocket of the selector, he must fall back on a slab hut, which, with a little trouble, will be found comfortable. The roof can be of bark, which, if it has been properly stripped and dried, will be found impervious to the rain. A building of this character need not cost more than a few pounds, and the architect is not bound to conform to any particular order. Contiguous to the house, space—before and behind—ought to be reserved for a garden, and farm and poultry yard. In cutting down the indigenous timber, allow the most shady in the grazing paddocks to remain for the shelter of the cattle.

CULTIVATION.—Breaking up new soil generally requires a plough of the strongest description, and is best done by bullocks. In the hurry to get seed into the ground, this work is frequently inefficiently performed, while the equally important work of draining is oftentimes altogether ignored. Virgin soil may, and frequently does, give a good return to the first year; but if a succession of good crops is to be looked for, thorough pulverization of the soil to a good depth, and a complete system of drainage, must be adopted. All new land is more or less “rank”; exposure to the air and underground drainage are the only remedies for this. Drainage is best effected by excavating a main drain at the lowest portion of the ground. Subsidiary drains will have to be formed—some few inches shallower than the main drain or drains. These can be formed, according

to the resources of the district, of stones, brushwood, or other material; but the layer of stones, &c., ought to be at least a foot in depth, to prevent the liability of choking. The number of drains depends entirely upon the peculiarity of the soil: but a distance of 30 to 40 feet may generally be allowed. To the garden the same remarks also in a measure apply. When the plough is not applicable, the work of subsoiling is done by hand, and is called trenching. "A trench or opening about three feet in width is made along one side of the land by throwing back or removing the soil and subsoil to the depth of at least one spit and a shovelling, which together may be from twelve to fifteen inches: the subsoil is then loosened: upon this loosened subsoil the surface spit of the next trench is thrown, and over it is cast the shovelling: the bottom subsoil is then broken up, and so the work proceeds." Trenching is essential, if a garden is to be properly cultivated.

IRRIGATION.—Great as is the nuisance of water in winter, the absence of it in summer is still more felt, and, where an artificial supply can be had, it is a boon of no small value. Of late years the practice of irrigation has come greatly into use. Irrigation is generally effected by leading the water on to the higher parts of the land, whence it gently flows over or filters through to the lower portions, where it is received in open surface drains, and conducted to a proper outlet. Where irrigation is practicable, its adoption is strongly recommended.

SEEDS.—In the choice of seeds, great care should be exercised to prevent disappointment. The respectability of the seedsman is generally a guarantee that the articles he supplies are of good quality.

MANURE.—Plants are composed of the following constituents:—Potash, soda, lime, magnesia, silica, phosphorus, sulphur, iron, and one or two other ingredients. These constituents or food it derives principally from the ground. It therefore follows that for the plant to thrive and grow healthily, it must be able to derive a sufficient supply from nature's treasury; in fact, this chemical food for the plant must be as plentifully supplied as food for an animal. It may easily be under-

stood that the bringing of a plant to maturity absorbs more or less of the earthy ingredients spoken of. If the land has not had this deprivation made good, it stands to reason that the second crop will be a poorer one, from the simple fact that the food available for the second plant is considerably less; and a carrying on of this process must in time exhaust the land, as has been the case on many of the tobacco and cotton plantations in America, and also in the impoverished ground in several of the older cultivated districts in Australia. Manuring, then, is simply another name for furnishing to the earth those constituents which experience has shown to be necessary to the growth of the plant. Farmyard manure, if properly prepared in heaps by alternate layers of garden soil, is as about fertilising an agent as can be used. Guano, bones, bone-dust, superphosphate of lime, nitrate of potash, nitrate of soda, and sulphate of ammonia, are the best substitutes. Superphosphate of lime may be made by breaking bones into an earthen or wooden vessel, saturating them with boiling water, and then adding about one-third the weight of the bones of oil of vitriol (sulphuric acid). In a week a pasty mass is formed, which can be mixed with ashes or earth, and used as a compost. The value of a manure depends upon its proportions of ammonia, phosphate of lime, and alkalies.

SUSPENDED ANIMATION—Send quickly for medical assistance; lose no time. Never hold the body up by the feet; nor rub the body with salts or spirits; nor inject infusion or smoke of tobacco. Place the body in a raised position; strip and rub dry; wrap in hot blankets in a warm bed, in a warm chamber, free from smoke. Wipe and cleanse mouth and nostrils. Put bottles or bladders of hot water, or heated bricks, to pit of stomach, arm-pits, between the thighs, and to the soles of the feet. Foment the body with hot flannels. Rub the body briskly with the hand, keeping up the other means; or, in place of all, immerse in warm bath at blood heat, or 98 degrees. In apparent death from cold, do not apply heat too quickly.

WOOL SORTING.—Wool buyers in Great Britain place the wool on tables, examine handful after handful, and put every sort by itself. It has often been a very painful operation to open bale after bale and find fine and coarse fleeces and locks so jumbled up together, that the general exclamation was, "I will never buy another bale from that brand, if I can help it." Sorting wool by the growers is not so difficult, laborious, and scientific an operation, or connected with so much expense, as may be thought by some. The main work is to separate the head, neck, feet, and a portion of the belly wool from the fleece; and a little practice will soon enable the inexperienced sorter to see the difference.—*Twelve years experience.*

The influences of climate and pasture upon the growth of wool are so thoroughly recognised and exemplified in various districts, as to need no further argument in support of their existence. The grower may easily determine what class of wool his country is best suited to produce, by carefully observing the direction in which the lapse of time is working a modification. Let him encourage, and not seek to counteract, this natural tendency by any violent or artificial means. Let him especially avoid the introduction of strange or imported blood, but, where necessary, select the best type of sheep acclimatised in his own latitude. The owners of flocks producing fine clothing wools have been frequently tempted to aim at securing greater weight of wool to the fleece than fine-woolled sheep usually yield; but the result has invariably proved that increased weight has entailed a corresponding sacrifice of quality, and, generally speaking, an increase of staple, which constitute an entire change in the character of the fleeces. SOUTHEY, BALME & Co., Woolbrokers.

FOOD AND DRINK FOR FOWLS.—Give the poultry plenty of maize and clean water; make it a rule always to have some lying about, so that the fowls may see there is plenty. No other plan yields so many eggs or so many fat chickens when they are wanted. Soft messes make the birds sleepy and slovenly in their habits, and engender more than half the diseases which ravaged the poultry houses before maize was plentiful.

TOBACCO.—There is but one kind of seed, but change of climate has made many distinctions.—The best time for sowing is February, and then transplant about six inches apart previous to the final transplanting in spring. It requires three quarters of an ounce for an acre; sow in a bed nine feet by four, well mixed with ashes or pulverised charcoal. Be sure you sow at a distance from any fence or growing crop, which would shelter slugs, which are immensely fond of young tobacco. When between four and five inches high, transplant at three feet apart each way in deep, well pulverised soil, inclined to be stiff. Keep your ground well cleared of weeds; earth up about twice from the period of planting to maturity. As the plants are coming to maturity, rub off suckers, nip off flower buds, and have not more than seven or nine leaves on each plant. After planting, and until firmly rooted, the plants must be shaded daily from the sun. If you sow in February, all this trouble will be obviated. An acre ought to produce 15 cwt., if properly cured. It is not more difficult to grow than cabbage or Indian corn. The best description for this climate is the Virginian.—*Zadriel*.

HOP BEER.—Good as tea is, we sometimes want a change—something brisk, sharp, and cool. Hop beer is made after the following manner:—To six gallons of water put four ounces of hops tied in loose canvas, mosquito curtain, net, or muslin; boil the hops for an hour, or until the bag containing them sinks to the bottom of the boiler. Then take out the hops, drain them through a cullender, and to the liquor add three pounds of sugar; the finer and better the sugar the clearer and pleasanter will be the beer. Stir the sugar well in, and boil for five or ten minutes; then take off and allow the liquor to cool. The bottles should be washed clean before using, and the corks are all the better for being soaked for an hour previous to use in scalding hot water. As soon as the liquor is cold, fill the bottles up to but not into the necks, cork tight, and set in the coolest place in or under the house. In two days the beer will be ready for use. It is a safe plan to tie the corks down with twine.—*Boto*.

PINES.—Mr. J. G. Gerlee, of Boggo Road, near Brisbane, gives the following in the *Brisbane Courier*:—"I send you the results of my twenty-three years' experience of the uses and value of this delicious fruit.—1st. Pineapples can be preserved, at a cost of 5s. per dozen, for exportation to any part of the world. 2nd. The juice from one dozen of pineapples will make three bottles of rich pure wine, worth 1s. 6d. per bottle. The fruit, after taking away the juice, will make 6 lbs. of jam preserve; and the peels alone will yield three bottles of cider. 3rd. Sixty pounds of pineapples (about three dozen), at a cost of 5s., will yield one gallon of alcohol, worth (at least) 17s., giving a net profit of 4s. per dozen. Brandy manufactured from the pineapple is far superior in flavor to brandy made from the grape; but the common still now in use is unsuited to the successful conversion of the pineapples into alcohol, as there exists a deleterious acid in the pineapple which the common still cannot extract. The method of extracting this acid is known only to myself and a few other growers. I would suggest that a company be formed to utilise the surplus pines grown. With proper management, our ridges far and wide would be cultivated, and be amongst our most valuable lands. A handsome return awaits a company with capital. Our growers would then realise, instead of 3d. and 4d. per dozen, as much as 10d. and 1s. I speak only of the most profitable plan in a commercial point of view. I do not advocate making alcohol of our fruits, and I am sure when the real value of the pineapple as a preserve is understood, the fruit will stand higher in the estimation of the colonists than to be converted to alcohol."

MR. GOYDER writes:—It is astonishing what horses will endure, when carefully managed, in the interior of Australia. I have on three several occasions seen horses travel without water to the close of the fifth day, and though, doubtless, they suffered much, none were lost from this cause. The principal cause of loss is over-driving; and horses, seemingly in splendid condition, become leg weary, and knock up, when a day or two's rest might have set them up again."

PLANTS FOR STREET SHADE, SELECTED BY MR. W. HILL, GOVERNMENT BOTANIST.
Plants suitable for the Darling Downs and high lands, all of which are deciduous.

Cedrela Australis—Red Cedar
Melia Azederach—Bread Tree of India
Acer Platanoides—Norway Maple
 " *Pseudo-Platanus*—Sycamore
 " *Saccharum*—Sugar Maple
Platanus Acerifolia—Maple-leaved Plane
 " *Orientalis*—Oriental Plane
 " *Occidentalis*—The Western Plane
Quercus Cerris—Turkey Oak
 " *Macrocarpa*—Large-fruited Amer. Oak

Quercus Alba—White Oak
 " *Robur*—British Oak
Ailanthus Glandulosa—Tree of Heaven
Morus Multicaulis—Silkworm Mulberry
 " *Alba*—White-fruited Mulberry
Broussonetia Papyrifera—Paper Mulberry
Leriodendron Tulipifera—Tulip Tree
Populus Tremula—Aspen Poplar
 " *Monilifera*—Spreading Poplar
 " *Alba*—Silver Poplar

List for Rockhampton, Bowen, Ipswich, Brisbane, Maryborough, and other coast places.
 Those marked with an asterisk (*) are deciduous.

**Cedrela Australis*—Red Cedar
 " *Odorata*—Indian Cedar
 **Bombax Edulis*—Silk Cotton Tree
Castanospermum Australis—Moreton Bay Chest.
Brachychiton Acerifolia—Flame Tree
Poinciana Regia—Royal Poinciana
 **Colvillea Racemosa*—Grand-racined Colvillea
 **Spondias Dulcis*—Sweet Otaheite Apple
Haematoxylon Campechianum—Logwood Tree

Ficus Elastica—India-rubber Tree
 " *Macrophyllum*—Moreton Bay Fig
 " *Religiosa*—The Peepul Tree
 " *Benjaminia*—Benjamin Tree
 " *Indica*—Banyan Tree
 " *Sycamorus*—Sycamore Tree
Laurus Camphora—Camphor Tree
 **Lagerstromia Regia*—Royal Lagerstromie, India
Arcecephalus Condatus—Leichhardt Tree

PRODUCTIONS OF QUEENSLAND in Agriculture, Fruit, &c., as shown at the Intercolonial Exhibition in Sydney, in Sept., 1870.—LIST OF EXHIBITS:—*Fibres* (11 varieties).—Queensland hemp, Mexican, Indian Sun, plantain, jute, China grass, bowstring, Ceylon, Guiana, rosella. *Cotton* (3 var.)—short staple New Orleans, long staple Sea Island, short staple Alabama. *Sugar Canes*.—Seventeen varieties. *Useful Timbers*.—Fourteen varieties. *Fancy Timbers*.—Twelve varieties. *Jams and Jellies*.—Rosella, Cape gooseberry, pineapple, Chinese date plum, shaddock, conquat, &c. *Useful and Ornamental Plants*.—Tea, coffee, yucca, allspice, cotton, yucca (2 var.), and 47 different varieties of ornamental plants. *Sugar*.—Sixteen varieties, from the following canes:—Socrat, Rappoe, Rappoe variety, Meera poetu, Djoengdjoeng, Lullen, Chegaca, Troehoe, Diard salangore, Diard rose, Ginzham, Bourbon, Chimens, Ribbon, and also a sample manufactured from several canes mixed. *Tobacco*.—Three varieties: Havannah, Virginia, and Manila. A sugar-bag, manufactured from leaves of Pandanus utilis. *Roots, &c.*—Ground nuts, sweet potatoes (3 var.), yams (4 var.), cassava (bitter and sweet), arrowroot (white and purple), turmeric, pineapples (4 var.), Queensland nut, bunya bunya cone, *Manufactures*.—West Indian, East Indian, and Brazilian arrowroot; Brazilian tapioca and cassareep; plantain, tgar, sweet potatoe, and maizena flour: maizena meal, turmeric, curry powder, birdseye, and bell cayenne pepper, allspice, Jamaica pepper, ginger, essence of ginger, cinnamon bark and oil, lime oil, lemon oil, oil of Seville orange, castor oil, croton oil, sesma (Tinnevely), sesma (Aleppo), European liquorice, madder, indigo, caoutchouc (Peru), tea (black), tea (Paraguay), coffee. *Preserves*.—Limes, lemons, Seville orange, shaddock, conquats, olives, jack fruit, mango, cherimoya, sweet sop, custard apple, alligator pear, granadilla, large and small, rose apple, purple guava, gooseberry guava, apple guava, leeches, longan, Chinese date plum, Chinese date plum jam, loquat, Brazilian cherry, pawpaw apple, Cape gooseberry, jujuba, rosella, pineapple, banana, tamarind, Natal plum.

In addition to the preceding wheat is produced with large results; also oats, maize, and potatoes; while the varieties of foliage plants are very numerous—altogether shewing that the range of the producing capability of Queensland is unequalled by any country on the earth.

SNAKE BITES.—From the shortness of the poison fangs in Australian snakes, which seldom exceed one-sixth of an inch, it is not necessary to cut out the flesh to any great depth, still less to chop off fingers or blast the wound with gunpowder. The first thing to be done is to suck the wound well. If the person who sucks out the poison has any scratch on his lips or mouth, he runs some risk; but if there is no such wound he may suck the poison into his mouth with perfect safety. Before swallowing anything, he should wash his mouth with salt and water. The next thing is to stop circulation between the wound and the heart, by tying a bandage tightly round about the limb about an inch above the wound. Then the bitten part should be raised up with a forceps, or in the absence of an instrument, with the finger and thumb, and a piece cut out not larger than a sixpence, nor deeper than one-sixth of an inch. If the flesh is well pulled up, there is no danger of cutting any of the veins or arteries; and the bleeding should be promoted by warm water. As a further precaution when the bleeding ceases, an ipecacuanha poultice may be applied. Dr. Berncastle thus sums up the treatment:—"The sucking, the ligature, the excision, and applying the ipecacuanha poultice." This treatment should be accompanied by an internal remedy against the prostration of the nervous system caused by the poison. The best means for rallying the system against this prostration is brandy or other spirits, taken pure, or as strong as the patient can take it. An amount of spirits that would intoxicate, or even destroy a person, in ordinary circumstances, will not produce any degree of intoxication after the bite of a poisonous snake. Dr. Berncastle disapproves of the common practice of dragging about a person under the influence of snake poison. Repose, fresh air, and stimulants, are appropriate remedies.—*Empire on Keffl and Berncastle's P.S.P.*

NOTE.—Brandy, whiskey, gin, or any other spirit should be given freely—about a wine glass every ten to fifteen minutes—until symptoms of intoxication are manifested. Example:—A girl 10 years of age was bitten by a snake, and during twenty hours before symptoms of intoxication set in, she had drank over three quarts of good whiskey; she recovered from the intoxication in a few hours, and suffered no more from the effects of the poison.

CURE OF SNAKE BITE.—The *Argus* relates that Mrs. Donovan, of Redesdale, was bitten by a brown snake about 1 p.m. An attempt was made to scarify the wound with a pair of scissors, and the wound was also sucked. Afterwards she took two nobblers of brandy, and applied Shires' antidote. At 6 p.m. when brought to the Kyneton Hospital, no bad symptoms, except drowsiness, appeared, but later in the evening this increased, and more brandy was given; in all, from the time of the bite till near midnight, seven ounces. The stimulants were now stopped, but by 12.40 the patient had become much worse; could not be kept on her feet, nor awake without shaking; pupils dilated, extremities cold and clammy. In consultation, it was decided to try Professor Halford's treatment. Twelve and a-half minims of the strongest liquor ammonia, diluted with twice as much water, was injected into a vein of the forearm. The patient roused instantly. "I do not feel a bit sleepy now," she said; in a few seconds the hands became burning hot; she now complained of headache, the veins were distended, and perspiration broke out in her face; she retched a little, and then said that she felt quite well, and began to walk up and down without help. At 8 a.m. she ate a hearty breakfast, and at 11 a.m. insisted on going home. She continued well.

ORANGE TREE BUGS.—To kill these pests take a solution of Gishurst's compound, two or three ounces to the gallon of water; or, solution of good soft soap, three or four ounces to the gallon of water, with half a gill of kerosine oil to each gallon. The preceding to be syringed over the trees. No more solution should be made at one time than can be used in the day. Best results have been secured by using the solution pretty hot, say 130 deg. Fah. The above have also been found efficacious remedies for scale and coccus and rather invigorates the growth of the trees than otherwise.

HOMOEOPATHIC REMEDY FOR SUNSTROKE.—As soon as the person is stricken, give one drop of tincture of camphor on a little sugar every eight or ten minutes for an hour, rubbing the head with brandy or gin. At the end of the hour give belladonna and carbo vegetabilis in alternation every half hour. As the patient improves, increase the time between taking the medicines from half hour to one, two, three, four hours and upwards, till well. Continue brandy, if the person is not better at the end of the hour.

SEEDS AND WEEDS.—It is common to see beds of plants completely covered with seedling weeds before a single plant of the crop appears. The following process is a preventive and a means of saving to all a tedious course of hand weeding, premising that the seed be sown at the same time that the ground is dug, and sown in drills:—To each parcel of seed intended to be sown, take twenty or thirty times the bulk of sand, or moderately moist riddled garden soil, and well mingle the seed throughout the mass. If the sand or soil be of a different color from the seed, where it is intended to be sown, it will assist the sower, by enabling him to see where the mixture falls. Put the whole in a box, or any convenient vessel, and set it aside anywhere out of the influence of sunshine or rain. As the various kinds of seed germinate at periods, longer or shorter, dependent on the temperature, the annexed table indicates the time that each variety demands every month in the year; it must therefore be left that length of time before sowing. If the seeds and soil get dry, sprinkle a little water over it. The number of days stated is less than required for each variety to germinate, allowance being made for unforeseen delay.—From Mr. Dickson's paper read before the Vic. H. S.

MATTHEW RIGBY,

(SUCCESSOR TO R. BULCOCK),

SEEDSMAN,

QUEEN STREET,

BRISBANE.

N. B.—DESCRIPTIVE CATALOGUES POST, FREE ON APPLICATION.

CALENDAR OF GARDEN AND FIELD CULTURE FOR QUEENSLAND.

BY JAMES JOHNSTON, GARDENER.

From twenty-two years' practical experience in Queensland.

JANUARY.

GARDEN.—Attend to the grapes as they ripen. The foliage of those wanted to hang till dead ripe should be arranged so as to shield from the rays of the sun. The Isabella may still be cut for late crop. Strong shoots of favorite grapes may be bent down and layered; in this way better rooted plants may be obtained than cuttings can produce, and a season saved. Peach trees should now be allowed and encouraged to make a sufficiency of wood for next season's crop. Attend to the pinching and shortening of young shoots on apple and pear trees. Stone fruited trees may now be budded. Make a small sowing of cucumber, French beans, and marrows for late crops. Intending cultivators of celery, cauliflowers, cabbages, &c., should get together as much dung as possible, the quality of which will be much improved by frequent turning. Make a small sowing of celery, cabbage, and cauliflower, in a shady place.

FIELD.—Sow maize for late crop. Sow patch of oats or barley for cutting green. Break up and prepare land for potatoes, lucerne, &c. In breaking up land it is better to leave the surface rough and open to the action of the sun's rays, which are the best pulverent. A rough surface also retards the growth of weeds. Arrowroot is now making its growth, and ought to be kept clean to allow the free circulation of air.

FEBRUARY.

GARDEN.—Take advantage of moist and dull weather for sowing for early crop small quantities of vegetable and salad seeds. To guard against failure from scorching, cabbage, cauliflower, and celery seed beds should be protected by a shading of calico or sacking. See to have some well-rotted dung prepared for celery trenches. Budding should be finished this month. In the flower garden, remove decaying foliage and save valuable seeds as they ripen.

FIELD.—In sheltered situations along the sea board, maize may be planted during the first two weeks of this month. Hill maize of former plantings: early hilling tends to keep down suckers. Continue the preparation of land for wheat, lucerne, and potatoes, and commence planting the latter.

MARCH.

GARDEN.—The scorching heat of our Queensland summer is now over, and this is the best time to enter thoroughly into the cultivation of European vegetables. Sow for full crops of cabbages, Savoy, cauliflowers, Brussels sprouts, couve tronchuda, turnips, carrots, onions, leeks, beans, peas, beets, parsnips, parsley, salads, &c. If any plants were raised from previous sowings, transplant on favorable occasions. It is a good plan to prick young cauliflowers into a bed of nice rich earth, placing them about four inches apart; they occupy little room, and can be easily watered and shaded for a few days. It breaks their roots, they emit small fibres, become more sturdy and compact, and do not droop so much when finally put out. Couve tronchuda, or Braganza cabbage, is a new vegetable of considerable value; the main rib of the outside leaves resembles sea-kale when well boiled, but the heart is the best; it ought to get as much room as cauliflowers. Cauliflowers yield a fair return when properly cultivated, but broccoli ought to be avoided by the cottager, as it is not suited to the climate, and does not expand its flower. Broad beans also frequently fail to pod, or do not pod till the spring: every bee keeper, however, ought to sow a quart or two, as they afford a rich pasturage to the bee at a time of the year when flowers are scarce. In the flower garden fill up vacancies caused by the removal of dahlias, &c., by sowing a selection of hardy annuals. Here again the bee keeper will find it to his advantage to sow plenty of mignonette, as no other plant furnishes such an abundant and continuous supply both of honey and pollen.

FIELD.—This is the best month for planting potatoes, and the planting should be, if possible, finished before the close of the month. Those planted last month should be hoed in due time, and the weeds well turned up to the sun. Sow mangold wurtzel; this plant is worthy of a trial by those interested in the home feeding of cattle; the aphides do not attack it, and if left in the ground, it will keep over our hottest and driest summer.

APRIL.

GARDEN.—Attend to those vegetables which were sown last month; beans and peas should be kept clean; cabbages and cauliflowers, when fit to handle, should be transplanted; turnips and carrots should be thinned. Sow some of the more suitable vegetables and salads for succession; but the cottage gardener will find little satisfaction from cauliflowers, Savoy, or Brussels sprouts, if sown late this month—his principal dependence for greens should be on the cabbage. Bananas during this and the next month or two are apt to break down; heavy bunches should be propped. In the flower garden all alterations or additions should be made, as evergreen shrubs, roses, &c., bear moving well now. This is also a good time to transplant bulbs. Make a sowing of hardy annuals for spring decorations.

FIELD.—Prepare land for oatens hay crops, and sow a patch for cutting green. Land intended for lucerne should be cleaned, drained, and deeply cultivated. The rapidity with which summer grass and other weeds cover the surface of the soil during the early months of the year, and the sudden effect of heavy rains, will be an objection to the preparation of land long before seed time; but in the case of lucerne, no pains should be spared in getting a pulverised and mellow bed for the seed. Lucerne may be sown. Mangold wurtzel may still be sown.

MAY.

GARDEN.—Sow cabbage, turnips, carrots, peas, onions, parsley, and culinary herbs—such as sage, marjoram, and thyme. Orange, and all evergreen fruit trees and ornamental shrubs may be planted during this and the two following months, but when convenient, give this month the preference. A situation sheltered from westerly winds should be selected for azaleas and camellias, which flower during June, July, August, and September, as shelter very much prolongs the enjoyment of the flowers.

FIELD.—Sow lucerne:—if this seed were sown in drills, so as to permit of being hoed as farmers do their wheat in England, it would give the young plants a good start, and would much promote the subsequent vigor and performance of the crop: if drilled, five pound less seed may be given to the acre. As spring maize, from the general dryness of the season, frequently yields but a poor return, it is better to sow a small breadth of this crop, and in its stead have oats or hay, the stubble of which, when ploughed in November and December, will give a full crop of maize. Commence oat sowing for hay crop, sowing the poorest soils first. Sow also wheat for grain crop. Attend duly to the hilling of potatoes.

JUNE.

GARDEN.—Peaches, mulberries, quinces, apples, pears, &c., may now be transplanted, but young and vigorous growing late peaches and apples, which are yet green, may be left for a week or two. The apple is coming more into favor in Queensland every year, and a few trees ought to be planted in every garden. The following are twelve sorts which bear well in the neighborhood of Brisbane:—Nonsuch, Mobb's Royal, Mammoth, Kirke's Golden Pippin, Five Crown Pippin, Greening, Smeating, Kerry Pippin, Golden Harvey Reinette, Blanche d'Espagne, Blenheim Pippin, Skelhouse Russet. Grape vines may be pruned, unless cuttings are wanted, in which case they had better be left till the middle of next month. If your vines are young, apply the knife fearlessly, cutting down to one or two eyes. Peaches, mulberries, figs, &c., should now be pruned, remembering that thorough pruning gives superior fruit. Heavy bunches of bananas should have a thin sack drawn over them, to protect them from the frost and the blighting influence of our westerly winds. The bottom of the sack should be opened, that the ripening of the fruit may be observed. Sow peas, turnips, onions, cabbages. In the flower garden, propagate petunias, verbenas, geraniums, by cuttings, and herbaceous plants by division.

FIELD.—Continue to sow oats for hay, and the lucerne sowing ought to be finished this month. Make preparations for the manufacture of arrowroot.

JULY.

GARDEN.—Go on with the pruning of deciduous trees. Vine pruning ought to be finished, and if an increase of plants is wanted, cuttings ought to be taken from straight well-ripened wood of last year's growth: they should be about fifteen inches long, and three-fourths of their length should go in the ground, and the earth should be well trod round their base. Orange grafting should be commenced. In the flower garden dig the flower beds, give a dressing of well-rotted manure when it is required. Frame roses, and sow such annuals as sweet peas, larkspurs, lupins, zinnias, phlox Drummondii, calliopsis tinctorius, German stocks. Re-pot fuchsias. The following selection of roses will give satisfaction to every one who will take the trouble to *cultivate* them:—Sourcéir de Malmaison, Sourcéir d'un ami, Safrano, Gloire de Dijon, Indien alba, Cranoise supérieure, Fairy, Princess Adelaide, Prince Albert, Bourbon Queen, Maréchal Niel, Gant des Batailles, Prince Camille de Rohan, Lord Macaulay.

FIELD.—The farmer ought to look forward to the planting of potatoes, sweet potatoes, cotton, arrowroot, and oats for hay, and lay his plans and prepare his ground accordingly; the plough should therefore be kept going, and the harrow and roller should follow the plough closely, to prevent evaporation. A few potatoes should be planted, and the manufacture of arrowroot proceeded with.

AUGUST.

GARDEN.—Orange grafting should be finished the first week of this month, and pears, apples, peaches, grapes, &c., as soon after as possible. The transplanting of trees should be finished: During this and the following months, some trees and plants may require watering, and every newly-planted tree, if the weather be dry, should be well settled in its place with water, and some litter placed over the roots to prevent the ground from baking. In all cases where watering has to be done as much should be given as will keep the ground moist for a considerable time, as frequent sprinklings are much more injurious than useful. In the first place they act as a stimulant, and interfere with the routine of nature. The earth is the storehouse from whence the plants draw their supplies, and which must come to them in the shape of moisture or vapour. The heat of the sun will call up as much moisture from the lower strata of the soil as will keep plants alive, and in some degree of health, long after the upper surface is parched and unfit for vegetation. The roots of plants spread themselves downward and outward to catch the moisture as it passes, at the bidding of the sun, to the atmosphere; and the foliage of plants accommodates itself to its circumstances, by becoming hard and evaporating less; or, in other words, it is forced to practise economy during bad times. In the second place, there are few soils porous enough in their texture to bear frequent surface waterings in bright weather, as, when water is given, it brings them to a condition more or less resembling mortar, while the next day's sunshine transmutes them to a state which may be described as "bricky." This rapid battering of the soil is accompanied by a strong evaporation, which is chilling and injurious to the foliage of the plants through which it passes; hence the rusty and unhealthy appearance of most plants which undergo a bi-weekly sprinkling. The aim, then, should be to get the water into the soil rather than on to it. To accomplish this, make a hole near the plant to be watered, and pour in as much water as will moisten the earth by diffusion for some distance round, but do not raise the water to within

three inches of the surface. When enough has been given, and the water well soaked away, fill the hole. There will be some evaporation and consequent chilling, but the washing and battering effects on the surface will be avoided. There are some hard-wooded evergreens, such as the camellia, which are rather difficult to establish in the ground during the fierce heat and drought of our spring months. A day or two before such stock are put out, the place where they are to grow should be thoroughly wetted, and when the ground has recovered sufficiently to work without sticking to the spade, the plants should be put in and well settled in their place with water; a few leafy boughs should also be stuck in to shade them from the mid-day sun. If treated in this way, they will gradually accommodate themselves to their new circumstances, and start into vigorous growth during their second season; whereas, bi-weekly sprinklings in bright weather is certain death to the camellia. Where it is absolutely necessary to practice surface watering, let it be done after sundown, and the ground forked up next day. Make a small sowing, in a sheltered place, of cucumbers, melons, and French beans.

FIELD.—Potato planting should be finished early this month. It is also well to begin the planting of maize, as the sooner it is planted the deeper it will root before the warm weather begins. Finish the making of arrowroot, and arrowroot may be planted.

SEPTEMBER.

GARDEN.—Pears and apples may still be grafted. The grape vines will now be pushing, and stakes and trellising, if not already attended to, should be got into proper repair at once. Galvanized wire, supported on hardwood posts, make a durable and cheap trellis. Attend to the vines as they break, and rub off superfluous shoots from the root and breast of the vine, and tie in young fruiting shoots in good time. White maize (not Tuscarora), if sown occasionally during this and the following months till January, will yield a vegetable, if used green, equal to green peas. Sow hibiscus rosella, make full sowings of French beans, cucumbers, rock and water melons, marrows, pumpkins, tomatoes, and capsicums. Transplant cabbages on favourable occasions. This is one of the driest periods of the year, and it is consequently a good time for the destruction of weeds. If walks and flower borders get a thorough cleaning just now, they will not give much trouble for some time. A neat verge or border for the walks greatly enhances the appearance of a garden: *Euphorbia Bojeara* may be suggested as suitable for this purpose; it is easily propagated by division and cuttings; is compact in its habit, and may easily be kept in trim; it stands the drought well, and is in flower during the greater part of the year. Dahlias will now be pushing, and should be put out. Fuchsias, also, will be growing fast, and ought to be carefully tended. If no cuttings were struck last month, it may still be done, selecting short jointed stiff young wood.

FIELD.—Finish maize planting for spring crop. Sow sorghum for green fodder. Plant arrowroot and sweet potatoes, sow cotton, tobacco, &c.; hill potatoes. Prune cotton; it is better to prune low—about six inches from the surface of the ground.

OCTOBER.

GARDEN.—Peach trees ought to be well attended to at this season, all young shoots, but more especially the gross ones should be pruned away. Those who will take this trouble will secure large fruit. The minor enemies of the cultivator, will now be manifesting their power. The ground ought to be cleared of the roots of cauliflowers and savoys destroyed by the aphid, but some roots of the cabbage may be left in the ground, as they yield a supply of wholesome greens during the summer. The grub may be committing ravages among the potatoes and maize, and the lily-bird among the marrows, cucumbers, and pumpkins; there is no cure for these pests but hand-killing, and it should be done. If the scale is spreading on the orange trees, dress with Gishurst's Compound, or reduce a strong clay to the consistence of cream, and apply it to the affected part: when it dries it will shell off and bring a great deal of the smut and scale with it. The vines will now require constant care; pinch laterals at their third or fourth leaf, and shoots disposed to ramble should be stopped. In tying in, dispose of the foliage so as to shade the fruit. It will be necessary after the middle of this month to keep a sharp look out for that dread scourge of the grape vine, *Oidium Tuckerii*. If the slightest trace of the disease is discovered, sulphur should at once be applied, either by itself, or mixed with any proportion of finely sifted lime up to one half. Sow cucumbers for succession. Plant pine apples and bananas. In the flower garden sow such annuals as balsams, cockscombs, nasturtiums, and amaranths.

FIELD.—If potatoes are not earthed up, do so at once, and do it carefully on account of the graat beat to which they will be subjected before they are ripe. Plant sweet potatoes, sow cotton, transplant tobacco. Cotton pruning should be finished the first week of this month.

NOVEMBER.

GARDEN.—Intending planters of pine apples and bananas should not allow this month to pass without accomplishing their designs, that they may derive the full benefit of the coming summer. It is time lost to put in these plants in autumn or winter, as they do not start into growth till roused by the heat of the following season. The Isabella, and some other grape vines, will yield a second crop if some of the strong shoots are now cut. In every bud along the cane the embryo flower for the next season is embedded, and if the shoot is cut while the sap is flowing strong in the vine, one or two of the buds next below the cut will burst, and, in the case of the Isabella, flower and bear fruit. In most of the other varieties, the flower, not being forward enough, either drops prematurely, or is absorbed into the young shoot. Begin with a few shoots of the Isabella. Attend to the training of the grape vine generally, remove suckers and all barren shoots that will not be wanted for next year, pinch laterals and shoots rambling beyond due bounds. The sulphurings of the last month may have only checked the vine disease; if the weather is moist and warm, great watchfulness will be necessary in order to avert the consequences of a fresh outbreak.

FIELD.—Hay making should be finished, and the stubble ploughed for winter maize; it is better, however, not to put in the maize seed this month, as the crop will be more heavy and regular if planted in December or January. There are often a good many blind or barren stalks in maize planted in November. Do not let the weeds make any headway among the cotton.

DECEMBER.

GARDEN.—It is a difficult matter to keep up a supply of vegetables during the summer months. French beans and marrows are the most certain, and foresight should be used in adapting the sowings to the probable demand. Marrows, however, may be stored or consumed by poultry and pigs, so it is better to have plenty. Good crops of pumpkins may be gathered from seed sown early this month. Should a day or two of moist dull weather occur, some cauliflower, cabbage and celery seeds may be sown. Prolong your grape season by extracting a second crop out of the Isabella. If the *Oidium Tuckerii* is not yet subdued, the vines may be syringed with the following mixture, as dry sulphur is unsightly on fruit which may in a few days have to go to market or appear on table. The mixture consists of one pound of sublimed sulphur, one pound of fresh slacked lime, and one gallon of soft water. These are to be boiled for twenty minutes, and then strained. To this liquor add one gallon more water, and boil for twenty minutes longer. It is then to be allowed to cool, and stored away in a jar. When used, mix one pint with ten gallons of water apply with a syringe.

FIELD.—Potatoes will now be fit to dig, and the inexperienced farmer should note that out of this crop, which was planted from imported seed, he will have to save seed for his March planting, as imported potatoes fit for seed cannot be had at that season. The best of the small are usually laid aside for that purpose. A valuable addition to the fodder for home consumption may be obtained by cutting the maize tops. They are eagerly eaten by both horses and cows, and should be cut after the tassel on the point of the cob is withered. Plough wheat and oat stubbles, and plant maize for winter crop. The great weed season is now approaching, and the best exertions of the farmer should be put forth to keep in advance of them by killing when young.

PROGRESS OF AGRICULTURE IN QUEENSLAND.

By ANGUS MACKAY, Editor of "*The Queenslander*."

MACHINERY AND TOOLS.

It is characteristic of the intelligence of the men engaged in sugar cane cultivation and sugar making in Queensland, that very few are found following any particular system. Both in the field and the boiling house, there are sufficient differences to prove that brains as well as muscle are at work. The same peculiarity is also observable in the general farming of the country; though there it is not so marked, owing to the limited capital employed in farming, which in many cases keeps the men in the old routine who would quickly improve upon it had they the means to do so.

The feature is a good one, for it proves that the agriculture of the country is open to any improvements which come before the agriculturists and ought to be specially encouraging to the inventors and manufacturers of Europe and America, who have improvements which they are desirous to bring into notice. There are few, if any, countries where their discoveries or improvements—if valuable—have met a better reception than in Queensland.

The intelligence of our agriculturists leads them to look to machinery for the solution of,—to them, a vital question—efficient labor at less cost than they have paid hitherto. To that end the East Moreton Farmers' Association have sent to the Southern States of America for the implements which enable their brethren in that country to do so much more work per man than has yet been done in this country. There is also a strong feeling abroad in favor of so simplifying and reducing the cost of patents as may tend to develop the inventive faculties and employ the indigenous material to the production of implements suited to the country. It is yearly becoming more evident that we are not exactly right in following the old systems of Europe in the cultivation of the soil. But up to the present time the best efforts have been cramped.

Our first want is a description of implements which, with horse power, will cultivate the soil between the depths of two and four inches, which is considered sufficient for surface stirring sugar cane, cotton, maize, tobacco, etc. It would not be a fault if the implements required considerable skill in handling, but the nature of the climate demands that the heavy labor attached to the usual run of European tools

should be transferred from men to animals—horse and bullock labor is both cheap and abundant. It would be an improvement did the working man ride upon instead of walk behind the cultivators. The implement would require to move quickly, and should be able to pulverise a breadth of six feet, or less, as required. In implements of heavy tillage—for ploughing from six to twelve inches deep—we are fully up to the times. The steam plough, harrow, and grubber are used in the colony on large estates; but there is still an opening for implements of that character, could they move about the country and do the heavy cultivation by contract. The double furrow plough is coming into use, and from the free nature of much of the soil, it is considered to be an improvement of value. But the use of all such heavy tools is confined to one or two ploughings per annum. To master the rapid growing weeds of summer, and to keep the surface of the soil continuously open for a few inches, the light working implements referred to are felt to be necessary.

Many improvements have been introduced in sugar machinery during the year, both by European manufacturers who have agents in the colony, and by the local foundries. Messrs. Smellie, of Brisbane, offer a complete plant, with engine, boiler, steam clarifiers, &c., at less than one half the cost of a plant of similar capabilities a few years ago. What is known as "The Gloag Apparatus" has been patented. It aims at evaporating the cane juice in a single enclosed pan, at low temperature, by means of a sufficient vacuum, which is secured by using the waste steam. The Gloag apparatus has been tested upon a small scale, and if it succeeds as well upon a large scale, it will be an advance upon the apparatus hitherto used for making raw sugars.

A cotton and corn planter is also amongst the Queensland inventions: it plants the woolly seed cotton most effectively, and has, in that respect accomplished what has puzzled the inventions of cotton planters for sixty years. It also plants corn or any large seed, opening the furrow, dropping in the seed, at any required depth or distance, harrows the soil over it, and rolls the whole as rapidly as a horse can walk. It promises to be a great boon to the cotton interest at a time when low prices are very much against the growers. The inventor is Mr. Henderson, of Kinghorn, Albert River.

SUGAR FARMING IN QUEENSLAND.

THE production of sugar in Queensland has developed features which make the industry very different from what is known as sugar planting in other parts of the world. There are many large plantations here, some of them employing over 100 hands; but the business is by no means confined to them. The introduction of small mills, worked by horse or steam power, and turning out from three to six tons of sugar per week, has enabled men with capital of a few hundred pounds to enter upon the manufacture of sugar as well as the cultivation of cane. The cost of the mills referred to, with the attendant "battery" of boiling pans and the many other things necessary for the manufacture of sugar, ranges from £210 to £850. They are coming rapidly into use, and enable the farmer to take off, or manufacture upon his own land. There are already (September, 1871), districts with half a dozen or more mills within a circuit of as many miles, where, three years ago, the settlers held doubts concerning the propriety of planting cane. The idea then prevailed, that to manufacture profitably, extensive and costly machinery, and proportionate capital, were absolutely necessary. But that idea has passed away. In the southern section of Queensland, and in the northern districts of New South Wales where the cane is grown, the industry is shaping itself more in the form of sugar farming than after the model of the large plantations of the old sugar producing countries. A man with ten or twenty acres of cane finds that he can erect sufficient machinery to manufacture his crop for a total of about £300; and many who commenced with small mills of this kind have enlarged them, and this year substitute steam for horse power. There are many reasons why this system of sugar making should prevail. An average acre of cane, ripe for the mill, will weigh fully forty tons, and it becomes evident that it is costly to move such a heavy and bulky mass any great distance—it simply will not pay; and without the

convenience which these small mills afford to the farmers, cane growing would be confined, of necessity, to the vicinity of the large mills, or to the banks of navigable streams, by which the cost of conveyance is brought to the lowest figure. Again, the cane commences to deteriorate as soon as it is cut, and if the manufacture is delayed, even for twenty four hours in close sultry weather, the cane is injured. But, beyond all other causes for the spread of sugar farming, there is an extensive and a growing population who own and farm for themselves from 50 to 500 acres, and these are the people who are developing sugar farming, which promises, at no distant day, to be amongst the leading sources of wealth in the country. The almost uniform success which has followed the efforts of those who have studied the art of sugar making, and their rapid increase has induced many to manufacture for themselves, who, a few years ago, did not see their way further than growing cane to be crushed upon shares, or for sale to the sugar manufacturers. As a rule, the cost of production decreases as the capabilities of the manufacturing appliances are increased, and in many cases it is better for the grower to arrange with a mill to manufacture for him. But there are exceptions even to this rule, and notwithstanding the increased difficulties of making sugar with imperfect machinery, and the consequent increase of cost of production, the sugar farmers are well pleased with their returns. If their profits are small, so is their capital, and with an increase of the one they have a good prospect of increasing the other. Their previous experience helps them to it. As an instance of the rapidity with which sugar farming is increasing, we notice the delivery recently by a local manufacturing firm, R. R. Smellie & Co., of the twenty-third mill of one size and pattern, who manufacture four or five other sizes. It was one of the smallest mills made by them for steam power. The capabilities of this size of mill are five tons of sugar per week, and the total cost of the complete plant for turning out a good drained sugar is £550. This may explain better than many pages of writing, that it does not require large capital to follow sugar farming in Northern Australia.

COTTON IN QUEENSLAND.

THE close of the cotton season of 1871 disclosed the facts that the crop (nearly 8,000 bales), was heavier by one third than any previous crop; and that, although the quality was superior to the bulk yield of any previous season, the price to the grower was less than ever before. This arose through the European War, which greatly reduced the manufacturer's demands; and also from the enormous crops of American and Indian cotton thrown upon the European market. Queensland cotton buyers could afford to give no more than $1\frac{1}{2}$ d. or $1\frac{3}{4}$ d. per lb. for cotton in the seed, and growers found that this price barely paid the cost of production. Indeed, it did not pay when all the labor of production had to be hired; with those who were able to pick with the aid of their own families, the case was a little better. Fortunately the crop was heavy—probably the heaviest ever gathered from an equal number of acres. In many cases, over 2000 lbs. seed cotton was picked per acre; the average was about 1000 lbs. But in the best of cases it was not considered a profitable crop, and many growers almost decided to abandon cotton. Many who have lands suitable for sugar cane did abandon it; but others who are in localities too cold for the sugar cane, but who have splendid land for cotton, are trying it for one year more. On the whole, there is an increase of land under this crop. The growers believe that as the Americans are in a position quite as bad as themselves; and that as they cannot produce to sell in England at less than 8d. per lb for clean cotton, that the price will go up to or exceed that figure. If so, cotton production, with free white labor, can be extended to any extent in Queensland. The business is already extensive; several firms, especially in West Moreton, have the most approved and extensive appliances for storing, ginning, and baling. Of the quality of the staple there are no two opinions. It is long, strong, perfectly ripe and dry, and remarkably clean. It has been against the cotton of Queensland ever since exportation commenced, that the brokers will persist in classing and selling it with the cotton of other countries, and

which differs from it in all the particulars enumerated. To some extent this has arisen from the small quantities shipped; but this year the crop is sufficiently heavy to test the market upon its own merits. The country has also the additional advantage of a line of ships, the property of a local firm, and sailing direct from Brisbane.

OPENINGS FOR ENTERPRISE.

ALTHOUGH the colonists of Queensland supply their own wants annually to the extent of more than one million pounds sterling, in comparison with the imports of a few years ago, there are still abundant openings for enterprise. £1,000,000 and more is still sent out of the country for goods which could be produced here—for the raw material exists in abundance.

The heaviest of our imports are woollen and cotton goods. The raw material of both is very low in price, and of superior quality. In proportion to the population their consumption is very heavy, as the annexed statistics explain. In blankets, shirting stuff, and tweeds, there is work for several mills, and the duty upon imported goods, in addition to the cost of carrying the raw material to England and the manufactured goods back again, should leave a sufficient margin for capital invested in manufacture of that kind. Coal and wood and the material for building are plentiful, and cheap. But machinery is wanted and skill to direct it.

Tobacco is imported annually to the value of about £30,000, and yet parties capable of comparing the relative merits of the leaf grown in this country with that of other countries, declare that for cigars the Queensland leaf is among the best they ever saw, while for ordinary tobacco it has but to be cured and manufactured as in America, from which the bulk of our imports are drawn, and it would equal if not surpass the tobacco of that country. But the proper appliances are wanted. The leaf can be grown in literally any quantity, and at as low a price as in any part of the world. The growers but desire a market for their produce, to induce them to erect proper sheds here for curing.

For flour we spend over £200,000 per annum, and yet the Queensland farmers get about twenty bushels of wheat per acre without using manure of any kind, and by broad casting the seed at the rate of two bushels per acre. The climate is too dry for broadcast sowing, and too vigorous for such heavy seeding. The soil of several parts of the Darling Downs is undoubtedly suitable for this branch of cultivation. Mill power is wanted capable of producing flour equal to that of South Australia. The drilling machine is also a necessity of success, and it might pay to import implements of that kind and sow by contract for the farmers, which would reduce the quantity of seed employed fully one half and do the work as it must be done to make wheat cultivation a certainty. There is also much room for improvement in the quality of the seed used, the best properties of which are run out by long cultivation. We also import about £5,000 worth of malt and £2,000 worth of hops annually, while barley and the hop plant grow luxuriantly.

Saddlery and harness are imported to the value of £20,000 annually, while the raw material is sent to the ends of the earth. Tanneries are now at work in the country, and the quality of their produce proves that it is not for want of leather that the manufactured goods are imported.

Soap and candles are also imported—the latter to the annual extent of over 2,000 lbs, while the tallow of the colony is famous in Europe, whence the candles and soap are sent here. There is an opening for the manufacture of stearine candles for our own use and for export.

The fisheries of the country, including dugong and other oil fish, are almost untouched. The butter and cheese produced are far below the demand. Limestone abounds, but it is not yet produced sufficiently cheap for agricultural purposes.

All the oil plants flourish, including cotton, the seed of which is wasted in enormous quantities. There are over a dozen varieties of the castor oil plant, which could be grown to any extent. Many of the native trees are rich in medicinal and mercantile essences, but they are almost untouched as yet.

HOW TO TAKE UP LAND.

By A. MACKAY, *Agricultural Editor of "The Queenslander."*

LAND, under the Homestead Regulations, can be acquired in Queensland under very favorable conditions—more favorable than the American homestead schemes offer—because here the settler pays no taxes or rates whatever for his land. The conditions are:—Selector to be 21 years of age, or the head of a family. Assisted and free immigrants must be three years in the country before they can select; others can select at once. The law allows to each selector 80 acres or less of agricultural land, or 160 acres of pastoral land; the price is paid yearly in the form of rent—9d. per acre for agricultural, and 6d. per acre for pastoral land for five years, with personal residence during that time. At the end of five years, a title is issued to the homestead selector without further payment; the land is then his own to do with as seems best to him.

By the term "agricultural land" is meant soil fit for field cultivation, and possessing the vegetable and mineral constituents necessary for agricultural purposes. What is termed "scrub," usually containing heavy deposits of alluvial soil very rich vegetable humus, is generally ranked among the best agricultural land; and there is black or brown soil in lightly timbered country, also rich in vegetable matter, and frequently overlying limestone, which also ranks as agricultural land. These two, and rich alluvial clayey-flat lands, generally upon the coasts, comprise the leading agricultural lands.

As "pastoral lands," are ranked soils with more than a fair proportion of sand or silicious matter, whether heavily timbered or otherwise. Such lands may be well grassed and fit for ordinary cultivation, but they have not the weight or body of the first-class soils.

For sugar growing and heavy farming, the first soils are the best; for cotton, fruit-growing, and lighter cultivation, much of the pastoral lands are well fitted. Soils of volcanic formation, red or light brown, are not profitable for the agriculturist; they are hungry and dry.

Lands which can be taken up under the homestead regulations are open for selection at the land offices, Bowen, Brisbane, Burketown, Dalby, Gladstone, Ipswich, Mackay, Maryborough, Rockhampton, Toowoomba, Townsville, Warwick; so that selections can be made in almost any district. In the offices, plans of the lands are exhibited, and the officers in attendance are generally in a position to explain the nature and quality of the land. No land can be taken up with safety unless gone over and examined; and for that purpose a few days may be well spent in looking over the country. Water supply, state of the roads or tracks, and other means of access, are all important items in selecting a homestead. When a choice has been made, the land office is again visited, and application made for the desired quantity. The officer registers the date and hour of the application ("first come first served" is the rule); the first year's rent of the land is deposited with survey fees (scales of which are exhibited). The application is then laid before the land commissioner of the district, and permission to occupy is issued, unless some other application clashes. This is the form of application for a homestead:—

I, _____ do hereby state my desire to become the Lessee of the Crown Lands described in the Schedule annexed, which are now open to selection without competition, as a "Homestead," under the provisions of *The Crown Lands Alienation Act of 1868*, and I hereby tender the sum of _____ pounds _____ shillings _____ pence, as the first year's rent, together with the survey fee _____ And I do solemnly declare that I am that I apply for such portion on my own behalf and for my own exclusive use and benefit, and not as agent or trustee for any other person whatever; that I have not on any former occasion exercised my right to select a "Homestead" under the Act, and that I apply for the purpose of actual settlement or cultivation; that I did not arrive in this Colony after the 1st of March, 1868, at the public expense, either

wholly or in part, within three years; and I further declare that I have not entered into any agreement to sell, demise, or mortgage the said portion.

Larger areas of unsurveyed land can be taken up to the following extent, under what are termed *The Conditional Purchase Clauses of the Land Act of 1868*;—Agricultural land, from 40 to 640 acres; first-class pastoral land, 80 to 2560 acres; second-class pastoral land, 80 to 7680 acres; at 15s. per acre for the first, 10s. per acre for the second, 5s. per acre for the third—each payable in ten annual instalments of 1s. 6d. per acre for agricultural, 1s. per acre for first-class pastoral, 6d. per acre for second-class pastoral. The land must be occupied by the selector or his servants, and in ten years titles are issued. We give the form of application. Blank forms are issued at the land offices.

I, do hereby state my desire to become the Lessee of the Crown Lands described in the Schedule annexed, which are now open to selection without competition, under the provisions of *The Crown Lands Alienation Act of 1868*, and I hereby tender the sum of

pounds shillings pence, as the first year's rent, together with the survey fee. I declare that I live in Queensland, and that I am above the age of twenty-one years, and that I apply for such portion on my own behalf and for my own use, and not as an agent or trustee for any other person whatsoever. And I further declare, that I apply for the said portion in order that I may use the same, and that I have not entered into any agreement to sell, demise, or mortgage the same.

The best lands for selection under the conditional purchase system just detailed are situated on the resumed halves of the different sheep and cattle stations of the country, which have reverted to the Crown in accordance with the Land Act of 1868. As in the case of selecting homesteads, the land in this case should be seen before it is taken up. Information as to situation, &c., can be had at the land offices, but it is advisable for strangers to secure some competent person as guide while in search of the best locations.

Land can be taken up specially for growing sugar and coffee, the principal inducements under which systems allow the selector to take up more agricultural land than he could under the last mentioned systems. By the coffee and sugar regulations the selector is compelled to put one-tenth of his land under cultivation within three years. Occupiers of land paid for with land orders can take up adjoining lands under the Homestead arrangement.

It will be seen that there is absolutely no restriction to the requirement of land. The conditions are not difficult. To all taking up land we would recommend a careful perusal of the *Crown Lands Alienation Act of 1868*, which treats the whole subject fully. The Act is for sale by the Government Printer and the booksellers.

GRANTS OF LAND TO VOLUNTEERS.—The following regulations under section 98 of the *The Crown Lands Alienation Act of 1868* have been published.

Every officer, non-commissioned officer, or member of the Volunteer Force of Queensland, not being on the paid staff, or serving for regular pay, who shall produce to the Colonial Secretary a certificate that he has served as an efficient member of such force, for a continuous period of five years from the passing of the *Crown Lands Alienation Act of 1868*, or that he has previously served for an equivalent period, thereby acquiring the right to a free grant of land, under section 98 of the Act aforesaid, shall be entitled to receive a certificate to select* ten acres of any suburban land which has been offered at auction during the preceding twelve months, and not sold; or fifty acres of any country land open to selection under the Act aforesaid; such privilege to be confined to one selection.

Such application shall, when lodged, be dealt with in the same manner as lands applied for under the leasing clauses of the Act, so far as relates to the payment of survey fees, approved by Land Commissioner at court sitting, and confirmation by Minister for Lands.

A FEW FACTS ABOUT QUEENSLAND.

From Government Papers, &c.

GEOGRAPHY.—The Moreton Bay District was erected into a separate colony under the name of Queensland, by Her Majesty's Letters Patent, June 6th, 1859. The boundaries were thus defined:—

Northward of a line commencing on the sea coast at Point Danger, in latitude about 28 deg. 28 min. south, and following the Range thence which divides the waters of the Tweed, Richmond, and Clarence Rivers from those of the Logan and Brisbane Rivers westerly to the Great Dividing Range, between the waters falling to the east coast and those of the River Murray; following the Great Dividing Range southerly to the range dividing the waters of Tenterfield Creek from those of the main head of the Dumaresq River, and following that river (which is locally known as the Severn), downwards to its confluence with the Macintyre River; thence following the Macintyre, which lower down becomes the Barwon, downward to the 29th parallel of south latitude, and following that parallel westerly to the 141st meridian of east longitude, which is the eastern boundary of South Australia, together with all the adjacent islands, their members and appurtenances in the Pacific Ocean.

The western boundary of the colony has since been extended to the 138th meridian, thus including a large and valuable portion of country, the northern shores of which are washed by the waters of the Gulf of Carpentaria, and which comprehends the tract known as the Plains of Promise, and the harbor called "Investigator Road." Squatting runs now extend to the shores of the Gulf.

Queensland is divided into twelve large districts, viz:—Moreton, Darling Downs, Burnett, Port Curtis, Maranoa, Leichhardt, Kennedy, Mitchell, Warego, Gregory, Burke, and Cook.

CLIMATE.—Experience has shown that the climate of Queensland is not unsuited to the constitutions of Europeans. Although the new comer may find the temperature unpleasantly high in the summer months, it is very seldom that ill effects are experienced from the heat by persons who do not indulge in excesses. During the winter months the weather in Queensland is magnificent. The nights and mornings are cool—quite cool enough to impart a degree of chilliness. In the middle of the day the atmosphere is delightfully clear. It is stated that the climates of Brisbane and Funchal in Madeira are almost identical, and that is saying much in favor of the salubrity of Brisbane. Farther north, at Gladstone, Bowen, and Townsville, the

* In cases where the area of the allotment exceeds ten acres, the boundaries of the same may be amended, with the concurrence of the Minister for Lands, so as to reduce the area to the maximum allowed to be selected; but all expenses of survey must be borne by the applicant, and the Minister reserves to himself the right of rejecting any proposed amendment.

temperature is higher; but nothing has been urged against the healthfulness of these towns. At Warwick and the other towns situated on the top of the range, the mean temperature is some degrees lower than it is in the coast towns; and it is the opinion of medical men that the climate of Warwick and Toowoomba is not to be surpassed anywhere.

PRODUCE.—The agricultural resources of Queensland are varied and extensive; although it may be said that they are as yet only in the first stage of their development. Owing to the great diversity of climate, consequent upon the immense extent of territory comprised within the boundaries of the colony, nearly everything that grows in any part of the world can be produced with advantage. The whole of the sea-board of the colony is admirably adapted for the growth of tropical and semi-tropical products.

Concerning cereals, and English fruits and vegetables produced on the farms situated on the Darling Downs, it may truly be said that finer samples could not be grown anywhere. Although the poorer class of soil is admirably adapted for the successful cultivation of the vine, very few persons have thought it worth their while to devote their attention exclusively to this branch of agriculture. The fruits at present cultivated most extensively for the market are the banana, pineapple, peach, loquat, guava, passion fruit, fig, melon, Cape gooseberry, orange, citron, lemon, and mulberry. Large quantities of bananas and pineapples are annually exported to the southern colonies. Very little care or trouble is required in order to produce any of the fruits we have enumerated, and it will readily be observed that dairy farming can be profitably combined with fruit growing.

SUGAR and COTTON are now established staple products of Queensland, and large returns can be had when the necessary care is exercised in choosing good land properly situated to avoid exposure to frost, and in having suitable appliances for their cultivation and manufacture.

That a large area of auriferous country would eventually be discovered in Queensland was prophesied some years since by the veteran geologist of Australia, the Rev. W. B. Clarke. Indications of the presence of gold and gold-bearing strata have been observed in every district of the colony during the past ten years; but it was not until the Gympie gold field was discovered that the colonists were enabled to recognise the probability that, in the course of time, the auriferous regions of Queensland would rival, in extent and richness, the famous gold-fields of Victoria.

COPPER has been found in various parts of the colony extensive deposits in which are calculated to yield large returns when capital and labor can be brought fully to operate upon them. In the table of statistics it will be found that the yield is rapidly increasing. Rich deposits of silver and lead have also been found.

EDUCATION.—The system of education in Queensland has been assimilated to the National system as carried out in Ireland. Fees have been abolished, and education has been free from January 1st, 1870.

Its administration is entrusted to the Board of Education, consisting of six members appointed by the Government, one of the Ministry being chairman. The property of the schools, and the lands granted for school purposes, are vested in this board, which has the control of the money voted for education, and the power to make bye-laws and regulations in connection with these schools, which must be in accordance with the National system of education as established here, and approved by the Governor. Aid is granted to schools not established by the Board on their complying with certain regulations; these are known as non-vested schools.

By "*The Grammar Schools Act*," assistance is given by the State for the formation and maintenance of educational establishments of a more advanced character than the Primary Schools. Upon the inhabitants of any district raising by subscription a sum of £1,000 for the purpose of establishing a Grammar School in that district, the Government supplement it by double the amount for the erection of the necessary buildings; and if the sum of £250 per annum be guaranteed for three years as school fees, by responsible parties, the Government give £500 per annum for the salaries of masters and current expenses.

THE MARQUIS OF NORMANBY

THE successor, as Governor of Queensland, of the late Colonel Blackall, arrived in the Colony on Saturday, August 12, 1871. He is in the prime of life, and possesses many qualifications, personal and otherwise, for the position he occupies. He is of hearty, genial, and simple manners—shrewd and intelligent—travelled and fond of travelling. When a young man, he went through the then comparatively unknown wilds of North-western America; and his experience of colonial gubernatorial duties, as Governor of Nova Scotia, extended over a period of about six years. The experience thus gained will now be of great value. The following is from Dod's Peerage:—"Second Marquis of Normanby, title created, 1838; Earl of Mulgrave, and Viscount Normanby, 1812; Baron Mulgrave, 1794 (Great Britain); Baron Mulgrave, 1768 (Ireland); Privy Councillor, 1851. George Augustus Constantine Phipps, only son of the first Marquis of Normanby, by the eldest daughter of the first Lord Ravensworth. Born, 1819; married in 1844 to a daughter of the late Captain Robert Russell, R.N.; succeeded his father in 1863. Was appointed ensign and lieutenant of the Scots Fusilier Guards in 1838; Deputy-Lieutenant of Yorkshire in 1844; Major of the North York Militia in 1846, which office he resigned in 1853. Was treasurer of the Queen's Household from January, 1853 to February, 1858; was added to the Privy Council on becoming Comptroller; was Lieutenant-Governor of Nova Scotia from January, 1858, to September 1863, when he was appointed a Lord-in-Waiting to the Queen; was M.P. for Scarborough from 1847 to 1851, when he was defeated after accepting office; regained his seat in July 1852, and sat until 1858." The noble lord has since held other offices in connection with Her Majesty's Household. He has the reputation of possessing great administrative talent, and has always taken considerable interest in colonial affairs.

PUBLIC INSTITUTIONS.

BRISBANE.—Acclimatisation Society; Hon. Secretary, J. G. Vidgen. Benevolent Asylum, J. Hamilton, Wardsman. Board for Relief of the Poor; Sec., A. Rawlins. Catholic Orphanage. ELECTORAL QUALIFICATIONS.

Every man twenty-one years of age, who is either a natural born or naturalised subject of Her Majesty, and who is either—

Owner of a freehold worth £100 above all charges and incumbrances, and which has been held in possession for six months previous to the time of registration. [This latter proviso obtains also in connection with the qualifications arising from households, salary, board and lodging.]

Occupier of a house or tenement of the annual value of £10; leaseholder to the annual value of £10, whose lease has not less than three years to run at the time of registration; leaseholder to the amount aforesaid, three years of whose lease has expired previous to registration; holder of a pastoral license from the Crown; receiving a salary of £100 a-year; or, paying for board and lodging, or, £10 a-year for lodgings only.

REGISTRATION OF BIRTHS, MARRIAGES, AND DEATHS.

Every Birth must be registered within sixty days, and every Death within thirty days, next thereafter respectively; and neglect of this regulation renders the parties liable to a fine not exceeding £10.

If sixty days have elapsed from the date of birth, the law requires the parent or other person making the application to register such birth, to pay a fee of two shillings and sixpence, and make a solemn declaration of the facts before a Justice of the Peace, prior to registration.

If possible, in all cases, the father or mother ought to sign as informant. If unable to write, let a mark be made.

No birth can be registered after three years have elapsed from the date thereof.

Every Minister who has celebrated a Marriage shall, within one month thereafter, transmit (in accordance with the Act 28 Victoria No. 15) the original certificate to the Registrar of the District; and every Minister who shall fail to transmit the certificate to the District Registrar shall be liable to a fine, not less than £10, and not exceeding £50.

In every case of Burial, the Minister or officiating person ought to receive from the undertaker or person having charge of the funeral, a certificate from the District Registrar, certifying the registration of the death—unless in the case of an inquest, when a certificate from the coroner or magistrate holding the inquest will be sufficient; and if any dead body shall be buried without such certificate, the person who may bury the same, or perform any funeral or religious service for the burial, or who shall in any way dispose of the body, shall forthwith give notice of the facts to the District Registrar.

Undertakers are subject to a penalty of £10 for each offence, if they refuse or neglect to send in to the District Registrar a certificate of each burial performed by them, as soon as possible after the burial takes place.

LIST OF SHEEP INSPECTORS AND DIRECTORS.

CHIEF INSPECTOR.—P. R. Gordon, *Brisbane*. DISTRICT INSPECTORS.—*Bowen*—A. Brook, *Brisbane*—J. E. de Villers, *Gladstone*—A. Wiggins, *Goondiwindi and Warwick*—G. T. Myles, *Texas*. *Maranoa*—W. Hunter, *St. George*. *Maryborough*—G. W. Roebuck, *Rockhampton*—D. Macpherson, *Townsville*—J. Gordon, *Warrego*—D. T. McKenzie, *Claverton*.

SHEEP DIRECTORS FOR 1871-72.—*BURKE*—M. Hetzer, *Urilla*; J. Brodie, *Donor's Hill*; J. Brown, *Tempe Downs*; E. R. Edkin, *Beames Brook*; R. R. Morisset, *BURNETT*—G. Clapperton, *Tarong*; C. R. Haly, *Taatinga*; A. G. Cameron, *Culcairgie*; G. H. Jones, *Baramba*; W. B. Green, *Mondure*. *DALBY*—W. Kent, *Jondaryan*; G. King, *Gowrie*; H. Cardell, *Tiereyboo*; T. S. Beatty, *Chinchilla*. *DAWSON*—J. Reid, *Camboon*; C. B. Dutton, *Bauhinia Downs*; Andrew Scott, *Goongary*; H. C. Gillies, *Mount Hutton*; G. L. Golden, *Juandah*. *GLADSTONE*—J. Bell, *East Stowe*; D. Wilson, *Raglan*; J. S. Bell, *Dungaree*; W. Young, *Mount Larcome*; F. Moreton, *Prairie*. *GOONDIWINDI*—J. Low, *Welltown*; H. E. Easton, *Billa Billa*; E. Lord, *Callandoon*; A. Wyndham, *Winton*; P. Devine, *Whetstone*. *KENYEDY*—J. G. Macdonald, *Adelaide Point*; J. H. Scott, *Bowen*; W. A. Browne, *Bowen*; W. Chatfield, *junr.*, *Bowen*; M. W. Cunningham, *Woodhouse*. *MARANOA*—H. W. Hammond, *Curriwillinghi*; T. H. Hill, *Boomberrah*; J. W. Witcomb, *Gnoolooma*; J. Cochran, *Gulnabar*; J. McLean, *Bindango*. *MITCHELL*—C. L. Hill, *Isis Downs*; W. G. Bell, *Tambo*; J. Stephenson, *Ravensbourne*; J. Rule, *Aranac Creek*; J. B. White, *Northampton Downs*. *MORFOTON*—G. Thoru, *junr.*, *Rosebrook*; D. McConnell, *Cressbrook*; A. Wienholt, *Fassifern*; John Robertson, *Colinton*; W. M. Bowman, *Mount Brisbane*. *PEAK DOWNS*—J. R. Black, *Yamala*; H. de Satzge, *Wolfgang Downs*; W. Kilgour, *Gordon Downs*; J. Hume Black, *Eaglefield*; C. W. Toussaint, *Oxford Downs*. *ROCKHAMPTON*—J. Archer, *Gracemere*; P. F. Macdonald, *Yaamba*; C. C. Mackay, *Morinish*; C. N. Birkbeck, *Yaamba*; R. Duff, *Clifton*. *SPRINGSURE*—R. Patten, *Cairdeigh*; H. S. Wills, *Cullinlaringo*; G. W. Griffiths, *Nardoo*; R. Neill, *Consuelo*; A. S. Lawrie, *Saunders' Station*. *WARWICK*—L. E. Lester, *Rosenthal*; F. J. C. Wildash, *Canning Downs*; A. Greenup, *Maryland*; J. Logan, *Moongoola*; T. Hammer, *Talgai*. *WARREGO*—F. M. Bulmore, *Oakwood*; F. N. Burne, *Landsdowne*; H. Tom, *Chesterton*; J. W. Torrance, *R. L. Patterson, Nive Downs*. *WIDE BAY*—R. Travis, *Clifton*; D. Hesham, *Goochey*; J. Eaton, *Teebar*; H. A. Bartol, *Moolboolaman*; T. Bloodworth, *Kilkivan*.

All imported sheep have to perform a term of two months' quarantine at the port of debarkation. Intercolonial sheep can be introduced borderwise free from all restrictions, except that of inspection. Sheep Directors are also Inspectors of Sheep by virtue of their office.

All imported cattle—other than intercolonial cattle—must be certified to by an Inspector prior to being landed from any vessel.

QUEENSLAND ELECTRIC TELEGRAPH.

W. J. CRACKNELL, SUPERINTENDENT.

Regulations.

1. All messages will be held strictly confidential. 2. Messages must be written with ink, in a legible manner, properly dated, and have a full and distinct address. The signature of the sender will also be required, in authentication of each message. Address and signature must not exceed ten words. Any words in addition to that number to be charged for. 3. All ordinary messages to be paid for before transmission, except in cases of unusual emergency, or replies to interrogatory messages, bearing the words, "Reply paid for." Press reports to be paid for at receiving station on delivery. 4. Cipher may be used in the transmission of messages, at 50 per cent. above the ordinary rates, but cipher words must not consist of more than two syllables. 5. To ensure greater accuracy, it is requested that all numbers may be expressed in words at full length, and repeated in figures. Charge will be made for the words only, although the figures also will be transmitted. 6. Messages will be transmitted in the order of their reception, with the following exceptions, in which precedence will be given, viz.: Messages on the service of the state, sickness, death, or sudden emergency. 7. When an immediate answer is required, the words, "Reply paid for: answer immediately," should be appended to the message. Messengers delivering will in such cases, be instructed to wait five minutes for a reply. 8. Every precaution will be taken to ensure the accuracy of all messages transmitted, whether important or otherwise. If desired, messages of consequence can be repeated from stations at which received to stations from which originally sent, on payment of an additional half-rate, but no responsibility will be undertaken, nor any claim for compensation entertained for any errors in transmission, or delay in delivery of messages, whether repeated or unrepeatd, nor for non-transmission, or non-delivery of messages, arising from any cause whatsoever. 9. Messages will be delivered free within one mile of the station to which transmitted. Charges for portage, horse, or boat hire, will be made beyond such distance, payable by the person to whom the messages are addressed. 10. Originals of messages transmitted, and duplicates of messages received, after being kept for three months, will be burned in the presence of the officers in charge of stations. 11. In the event of an interruption in the working of the Electric Telegraph by which messages may be unusually delayed, it will be optional with the senders to withdraw such message before transmission, and receive back amounts paid.

CHARGES FOR TEN WORDS FROM OR TO BRISBANE.

For each additional word, and each word over ten in address and signature, one penny.

At Railway Stations where no Electric Telegraph Station is opened, and where there may be a telegraph instrument in circuit on the line of the Railway Department, Railway Station Masters will receive messages, to be transmitted to the nearest Telegraph Station, by Railway wire, and from thence forwarded to their destination by Electric Telegraph Department. Railway Station Masters will

collect the charges due to the Telegraph Department, and in addition, one shilling on each message for transmission by Railway line. Message forms may be obtained at any such Railway Station, and the Station Master will furnish information as to cost of transmission.

At Country Post Towns where no Electric Telegraph Station is opened, Postmasters have been appointed receivers of messages, which they will forward for transmission to the nearest Electric Telegraph Station, by first post. Persons desirous of using this means of communication will hand their messages to the Postmaster, together with the cost of transmission, twopence (2d.) for postage, and sixpence (6d.) Postmaster's fee. Message forms may be obtained on application at any such Post Office, and the Postmaster will furnish information as to the cost of transmission.

N.B.—Messages sent by Electric Telegraph can be posted to any address, Colonial or Foreign, on pre-payment of postage, in addition to the ordinary charge for transmission.

All Stations are open from 9 a.m. to 6 p.m. daily, Sundays excepted.

INTERCOLONIAL TELEGRAPH CHARGES.

All messages must be pre-paid. Address and signature must not exceed ten words.

POST OFFICE ARRANGEMENTS.

General Rules.

All letters and packets posted in Queensland must be pre-paid, by affixing stamps. Any letter posted for delivery in the Colony will, (if the stamps thereon be not grossly deficient), be forwarded and charged with double the postage deficient, but if grossly deficient, it will be opened and returned to the writer.

Any letter posted for transmission to the United Kingdom will, if bearing a single rate of postage, be forwarded—the partial postage thus paid being taken as a fine here, and the full postage being chargeable on delivery—but if not bearing a single rate of postage, it will be opened and returned to the writer.

Any letters posted for transmission to the neighbouring Colonies, and to Foreign Countries (unless specially mentioned in Table B,—see Monthly Postal Guide) and British Colonies generally, whether sent direct or through the United Kingdom, will invariably be opened and returned to the writers, unless they bear the *full amount* of postage payable thereon.

A postmaster may refuse to receive or transmit by post any letter, packet, or packet of newspapers exceeding sixteen ounces in weight, or of inconvenient form or dimensions, or containing, or reasonably suspected to contain, any article likely to injure the other contents of the mail bags or any person.

It is suggested that all letters intended for transmission by the Royal Mail contract steamers should be secured with gum or wafers, sealing-wax being liable to cause delay, from letters adhering and becoming defaced.

Letters are registered for sixpence in addition to the proper postage, a receipt for the same given, and every precaution adopted to ensure its safe delivery by entering it on the Letter Bills, and obtaining a receipt for the same on delivery. As the Post Office, however, is not responsible for the loss of *any letter*, whether registered or otherwise, parties sending Bank Notes or Drafts are advised to take the number and particulars, and to cut such Notes or Drafts in halves, and to send them by different posts. Letters, on being re-directed, are chargeable with a new rate of postage.

Unclaimed Letters.

Letters, if not claimed, are kept at the Post Office to which they are directed for a period of thirty days. If not claimed at the expiration of that time, they are sent to the Dead Letter Office, to be advertised in the *Government Gazette*.

Letters posted within the colony of Queensland, if not claimed within one month from the date of such publication, are returned to the writer.

Letters posted in any of the Australian Colonies, or New Zealand, if not claimed within three months from the date of such publication, are returned unopened to the Colony from which they were received.

Letters posted in the United Kingdom, or at any place beyond the Australian Colonies, if not claimed within twelve months from the date of such publication, are returned unopened to the colony or country from which they were received.

Rates on Letters.

Town Letters for delivery within the limits of the City or Town in which Letters are posted—Not exceeding $\frac{1}{2}$ oz., 1d.; exceeding $\frac{1}{2}$ oz., but not exceeding 1 oz., 2d.; and for every oz. or fraction of an oz., 2d. additional.

Inland Letters for transmission between separate Post Towns within Queensland—Not exceeding $\frac{1}{2}$ oz., 2d.; not exceeding 1 oz., 4d.; and for every oz., or fraction of an oz., 4d. additional.

Letters to Foreign Countries and British Colonies, excepting New South Wales, South Australia, Western Australia, Tasmania, and New Zealand forwarded by private ship to destination, or to nearest port, as opportunity occurs—Not exceeding $\frac{1}{2}$ oz., 6d.; not exceeding 1 oz., 1s.; and every additional $\frac{1}{2}$ oz., 6d.

New South Wales, South Australia, Western Australia, Tasmania, and New Zealand—Rates per each $\frac{1}{2}$ oz.—New South Wales—By sea, 3d., Overland, 2d. South Australia—By sea, 3d., Overland, 4d.; to consist of the following stamps, viz.:—Queensland, 2d.; New South Wales, 2d. Western Australia, Tasmania, and New Zealand, each 3d. Registered Letters to South Australia overland, in addition to Queensland rates must have New South Wales stamp 4d., for Registration fee.

Letters to and from the United Kingdom—Not exceeding $\frac{1}{2}$ oz., 6d.; exceeding $\frac{1}{2}$ oz., but not exceeding 1 oz., 1s.; exceeding 1 oz., but not exceeding 2 ozs., 2s.; and so on, increasing 1s. for every additional oz. or fraction of an oz. Letters *via* Marseilles— $\frac{1}{2}$ oz., 10d.; increasing 10d. for every additional $\frac{1}{2}$ oz. or fraction; *via* Brindisi— $\frac{1}{2}$ oz., 9d., increasing 9d. for every additional $\frac{1}{2}$ oz. or fraction.

Registered Letters—A Register Stamp of the value of 6d., only to be had on registration must be affixed, in addition to the postage chargeable.

Exemption from Postage Rates—All Petitions or Addresses to Her Majesty, His Excellency the Governor, or any Member of either Executive or Legislative Council, not exceeding 32 ozs. in weight, and without covers, or in covers open at the sides; Savings' Bank Books; Letters on Government Insurance and Annuities (provided they be marked outside respectively "Government Savings' Bank," "Government Annuities," or "Government Life Insurance.")

FOR EGYPT, ITALY, THE CONTINENT OF EUROPE, *via* BRINDISI; THE IONIAN ISLES, GREECE, TURKEY, TRIESTE, NORTHERN EUROPE, *via* TRIESTE; THE FRENCH POST OFFICES IN THE LEVANT, CONSTANTINOPLE, AND BELGIUM:—Letters, 6d. every $\frac{1}{2}$ oz. Newspapers, 1d. each.

FOR THE MAURITIUS, INDIA, CHINA, JAVA, ETC., by Mail Steamers *via* Galle:—Within $\frac{1}{2}$ oz., 1s.; Within 1 oz., 2s.; every additional $\frac{1}{2}$ oz., 1s. 6d.; or every additional oz., 2s. Newspapers and Prices Current 2d. each. Books, 4 ozs., 3d.; or, each 8 ozs., 6d.

Postage to certain Foreign Countries and British Colonies.

LATEST ALTERATIONS IN POSTAGE RATES, &c.

LETTERS.—*Town*—One Penny; *Inland*—Twopence; United Kingdom, *via* Southampton—Sixpence *each half ounce*.

NEWSPAPERS—to places in paragraph under “Egypt,” &c., are Twopence each, *not* One Penny.

PACKETS.—*Inland*—One Penny, *each two ounces*; Gold Packets, Fourpence *each half ounce*.

LETTERS addressed to and through ITALY, will, in future, be sent direct to BRINDISI, and can be fully prepaid as follows:—Italy, 9d.; Austria, Belgium, German States, Netherlands and Switzerland, 1s. 3d.; Denmark, and Holigoland, 1s. 9d.; and Norway, Russia, and Sweden, 2s. 7d., *each half ounce*. *Newspapers* and 2 oz. *Packets*—Italy, 2d.; Austria, German States, and Switzerland, 3d., other places as above, Newspapers, 5d.; Packets, 4d.

POPULATION.

It is roughly estimated that the Population of Queensland, by the Census of September, 1871, will show a total of 120,000.

PRODUCE IMPORTED.

The total of the Imports during 1870, of those articles which can be produced in Queensland, is £210,489. For previous years, see page 2 of this Almanac, which shows a considerable improvement by a reduction of the quantity imported. The items included, are—Flour, butter, oats, maize, malt, hay, hops, honey, poultry, arrowroot, cheese, ham, bacon, and onions.

TELEGRAPH LINES.

Mr. Cracknell informs us that stations have been opened at Cashmere, Junction Creek, and Georgetown, Etheridge River, being the first section (176 miles in length) of the Gulf extension. Fifty miles additional will be completed in the course of a few days; and consequent upon the arrival of the Spunkie, schooner, at Norman River, on the 22nd instant, the whole line to the mouth of the Norman, on the shores of the Gulf of Carpentaria, will be completed, and opened by the first week in December.—*Courier, October, 1871.*

ERRATA.

Under “MASONIC,” page 28, G.M. should be D.G.M. Gregory; G.M. Boyce, and G.M. Sir M. C. O’Connell should be P.G.M., &c., &c.; and J. M’Donnell should be E. MacDonnell.

Nos. 5 AND 6, EDWARD STREET, BRISBANE.

Packages

Include Bankers's packets, containing notes, orders, cheques, pass-books, returns, or other periodical statements; process of, or proceedings or pleadings in any court, briefs, cases, and instructions, for counsel, and their opinions thereon respectively, deeds, affidavits, policies of assurance, letters of attorney, depositions, or recognizances; patterns or samples of merchandise not having a value of their own, apart from their mere use as patterns or samples, and either unenclosed or enclosed in transparent bags, or in bags tied round the neck so as to be easily loosened and re-fastened; prices current and catalogues; Acts of the Queensland or Imperial Parliament, or printed Votes and Proceedings of either House thereof respectively, or vouchers, or returns, or copies of returns, made by, or to any officer in the public service; scrip, pamphlets, maps, plans, specifications, music, photographs (on paper), magazines, reviews, placards, almanacs, prospectuses, paintings, engravings, printers' proofs, or periodical publications, other than newspapers; printed or plain books; seeds in transparent bags or papers, tied so as to be easily loosened and re-fastened, not exceeding sixteen ounces in weight.

Regulations.

Packets to be in covers opened at the ends or sides, and the contents legibly endorsed thereon, and no packet shall exceed two feet in length, one foot in width and depth, and three pounds in weight. 2. There shall be no letter either closed or open, nor any enclosure, sealed or otherwise closed against inspection, sent in or with any such packet, nor shall there be any letter or any communication in the nature of a letter written or printed on the cover or envelope of any such packet; the name and address of the sender may appear on the cover as well as those of the party addressed, but this is not indispensable. 3. Should a packet be posted unpaid, or, excepting those addressed to the United Kingdom, insufficiently prepaid, or be enclosed in a cover not open at the ends or sides, and contents not legibly endorsed, or should it exceed the dimensions or weight specified, such packet will be sent to the Dead Letter Office, and returned to the sender. Packets addressed to the United Kingdom only, insufficiently prepaid, will be forwarded, charged with additional postage equal to the deficiency, and a further rate as a fine. 4. Should any letter, whether sealed or open, or otherwise closed against inspection, be found in a packet, such letter or other enclosure will be forwarded, charged not only with the postage due upon it as an unpaid letter, but also with an additional single packet rate. The packet itself, in such case will be forwarded, provided the postage shall have been duly paid, without any extra charge. 5. No article likely to injure the contents of the mail bags, or the person of any officer of the Post Office, will be forwarded as a pattern. 6. Metal, nails, watch machinery, cutlery, and other articles of intrinsic value, cannot be forwarded to or through France.

N.B.—In cases where, from the arrival of Packet Ships from England, or from any other cause, the number of such Packet is unusually large, the Postmaster, in order to prevent interruption to the punctual despatch of the ordinary Mails, is authorised to delay the transmission of any such Packets for three successive posts.

Particular attention is drawn to the fact, that the Sample Post does not extend to the neighboring Colonies, nor indeed to any place not mentioned in Section XVIII. of the rates mentioned in the Postal Guide; neither can Returns (except from one Government Department to another), nor Legal Documents, be forwarded to any place at the Book Rate of Postage.

Rates.

INLAND PACKETS.—Not exceeding 4 ozs., 2d., and every additional 2 ozs. or portion, 1d.

Packets of Gold transmitted within the Colony—Not exceeding $\frac{1}{2}$ oz., 4d.; exceeding $\frac{1}{2}$ oz., and not exceeding 1 oz., 8d.; exceeding 1 oz., but not exceeding 2 ozs., 1s. 4d.; and so on, increasing 8d. for every additional oz. or fraction of an oz.

FOR NEW SOUTH WALES, NEW ZEALAND, SOUTH AUSTRALIA, TASMANIA, VICTORIA, AND WESTERN AUSTRALIA :—Every 2 ozs. or portion, 2d.

FOR THE UNITED KINGDOM.

For every four ounces, or fraction of four ounces, up to three pounds, *via* Southampton, 4d., *via* Marseilles, 6d. and *via* Brindisi, 7d. In the case of Brindisi, packets can be sent within one ounce 5d., and within two ounces 6d.

FOR EGYPT, ITALY, THE CONTINENT OF EUROPE, *via* BRINDISI; THE IONIAN ISLES, GREECE, TURKEY, TRIESTE, NORTHERN EUROPE, *via* TRIESTE; THE FRENCH POST OFFICES IN THE LEVANT, CONSTANTINOPLE, AND BELGIUM, 4d. for every four ounces or portion of four ounces.

FOR THE MAURITIUS, INDIA, CHINA, JAVA, ETC.—Within 4 ozs., 3d., within 8 ozs., 6d., every additional 8 ozs. or portion, 6d.

Newspapers.

Newspapers are transmitted within the Colony free of charge if posted within seven days from the date of publication; if posted after that period, they are subject to a charge of one penny.

Newspapers received from beyond the Colony, in monthly parts, are (when re-posted), subject to the charge of one ld. for every number contained therein.

Newspapers for the United Kingdom, 1d., or, *via* Marseilles, 3d.; or, *via* Brindisi, 4d. each, every four ounces or fraction.

Newspapers for the neighbouring Colonies, and for all places beyond the seas not already specified in the Table A, (which can be seen at the Post Offices throughout the Colonies), are transmitted free of charge, and all newspapers from such places received in the Colony are delivered without charge; but if re-posted in the Colony, 1d. each must be prepaid. Every newspaper may be with or without a cover, open at both ends. There shall not be any enclosure, mark, or communication, other than the words "Newspaper only" the printed name occupation and address of the publisher or vendor, in addition to the name, occupation, and address of the person to whom sent.

Money Orders.

Money Orders may be obtained and made payable at the offices marked with an asterisk in the list of Country Postmasters, page 43 of this Almanac, and at the places in the other Australian Colonies as per list in Postal Guide, pages 25 and 26, on the following charges:—*Queensland*: For any sum not exceeding £5, 6d.; exceeding £5, but not exceeding £10, 1s. *Intercolonial*—New South Wales, New Zealand, South Australia, Tasmania, Victoria, Western Australia: For any sum not exceeding £5, 1s.; exceeding £5, but not exceeding £10, 2s. *British*—At any Money Order Office in the United Kingdom: For any sum not exceeding £2, 1s.; not exceeding £5, 2s. 6d.; not exceeding £7, 3s. 6d.; and not exceeding £10, 5s.

No Money Order will be issued for a larger sum than Ten Pounds.

Money Orders must be obtained between the hours of 10 a.m. and 3 p.m. The Money Order Office, at the General Post Office, will be kept open until 6 p.m. the day previous to the despatch of the Mails for the United Kingdom, *via* Suez; but no Money Orders will be issued on the day of closing the English Mail unless that Mail should be despatched in the evening.

List of Money Order Offices in New South Wales, New Zealand, South Australia, Victoria, and the United Kingdom may be seen, and further information obtained, at any Money Order Office in Queensland.

PRIVATE BAGS.—Settlers upon Mail Routes requiring the accommodation of a Private Bag, can obtain the same upon payment (in advance), of a sum not exceeding Two Guineas per annum to the Postmaster, who has to make up the bag, subject to the following regulations, viz.:—

(1.) The bag must be of leather, and provided at the cost of the person requiring it. (2.) The Postmaster will close and seal securely before despatching it; and it must be returned in like manner, sealed with some seal, the impression of which is known by the Postmaster. (3.) The bag may contain letters for all persons who give *written authorities* to the Postmaster to enclose them; the person passing for the private bag is responsible for the postage of all unpaid letters, and for the receipts for all those which may be registered.

Steamers going to anchor below Flats, waiting Tide—Third D Pendant below D Flag.

Ship of War—Union Jack below D Flag.

Vessel with Troops—Numeral Pendant below D Flag.

Vessel with Governor—Union Jack above D Flag.

Vessel with Immigrants—Red Ensign above usual Signal.

Steamer with English Mail—Red Ensign below usual Signal.

Vessel passed Port—Ball at Yard-arm, with D Flag under.

English Mail, *via* Suez, arrived in any adjoining Colony—Red Ensign on Observatory Flag-staff.

Via San Francisco—Blue Ensign, do.
A.S.N. Company's Steamers—Their Flag, which is divided diagonally into four parts, each side quarter blue, and top and bottom red.

CALIFORNIA MAIL.—On the arrival at Sydney of the Steamer with the English Mail *via* California, a BLUE ENSIGN will be hoisted on the staff of the Observatory, Brisbane, for two hours.

The numbers of the Flags are composed of stripes or stars. Any number higher than nine is indicated by one flag over another—3 over 5 indicating 35.

SIGNALS IN USE AT THE PORTS OF QUEENSLAND.

Pilot—Union Jack at the fore.

Pilot Boat—White and Red, horizontal

Customs—Union Jack at the peak.

Water Police—(Day Signal)—Ensign at the main.

Water Police—(Night Signal) Gun to be fired, and a bright light hoisted at the peak and mizen.

Steamboat—Rendezvous Flag at the peak or mizen.

Gunpowder on board—Union Jack at the main.

Health Officer—Blue Flag at the main.

Medical Assistant—No. 5 at the peak.

Mails on Board—White Flag at the fore, to be kept flying until the mails are delivered.

English Mails—Ensign at the fore.

Exemption—(Day Signal)—White Flag at the main.

Exemption—(Night Signal)—Two bright lights hoisted vertically, at some conspicuous part of the vessel, the distance between the lanterns not being less than three feet.

Government Immigrants on Board—Ensign at the mizen.

Quarantine—Yellow Flag at the main.

On and after the 31st March, 1870, Marryatt's Code of Signals ceased to be used from, or recognised by any Signal Station, Pilot Vessel or Lightship in this Colony. All communication by Signal being thenceforward made only by the Commercial Code.

The additional Flags required to complete the Commercial from Marryatt's Code are,—M, Q, V, W, and the answering pendant, while No. 0 can easily be converted into K, and No. 8 into P.

SIGNALS USED TO DENOTE ARRIVAL OF VESSELS AT ROCKHAMPTON, MARYBOROUGH, PORT DENISON, AND CLEVELAND BAY.

To claim exemption from pilotage, show, in addition to white flag, the numeral pendants, denoting the port sailed from. The numeral pendants—which are similar to those used in Sydney and Brisbane—must be hoisted where they can be most easily made out from the Signal Stations.

COMMERCIAL CHARGES.

In the following transactions approved by the Chamber of Commerce, Brisbane.

- On all purchases of merchandise or property, not otherwise specified herein when not in funds ... 5 $\frac{1}{2}$ percent
- Ditto, when in funds ... 2 $\frac{1}{2}$ —
- On purchase and shipment of gold-dust ... $\frac{1}{2}$ —
- On all sales of merchandise or property, not otherwise specified herein, whether for cash or credit, 5 —
- For guarantee on ditto ... 2 $\frac{1}{2}$ —
- On sales or purchases of Government securities or shares in public companies ... 1 —
- On sales or purchases of ships or houses ... 2 $\frac{1}{2}$ —
- On sales or purchases of stock or stations ... 2 $\frac{1}{2}$ —
- On sales of wool, tallow, hides, or sheepskins ... 2 $\frac{1}{2}$ —
- On consignments of merchandise or other property, withdrawn and delivered to order one half the rates chargeable, in case of sale, on invoice value.
- On advances on produce for shipment ... 2 $\frac{1}{2}$ percent
- On recovering debts, rents, dividends, interest on mortgages, &c., 5 —
- On guaranteeing bills, bonds, letters of credit, &c. ... 2 $\frac{1}{2}$ —
- Acting as trustee in assigned estates, on amount realised (if more than one trustee, the commission to be divided) ... 5 —

N.B.—Auctioneers' commission, or brokerage, to be charged when incurred.

- On investments made on mortgage or otherwise ... 2 $\frac{1}{2}$ —

SPECIAL DUTIES.

<i>SPIRITS.</i> —Brandy of any strength not exceeding the strength of proof by Sykes' hydrometer, and so in proportion for any greater or less strength than the strength of proof—per gallon...				12s.
Spirits or strong waters, excepting brandy of any strength not exceeding the strength of proof by Sykes' hydrometer, and so in proportion for any greater strength than the strength of proof, per gallon				10s.
Spirits, cordials, or strong waters, sweetened, or mixed with any article so that the strength there cannot be exactly ascertained by Sykes' hydrometer, per gallon				10s.
Methylated spirits—liquid gallon				5s.
Wine, containing more than 25 per cent. of alcohol of a specific gravity of '825 at the temperature of 60 degrees of Fahrenheit's thermometer, for every gallon in proportion to strength—gallon				10s.
Wine, not containing more than 25 per cent. of alcohol of a specific gravity of '825 at the temperature of 60 degrees of Fahrenheit's thermometer—gallon				6s.
Ale, beer, porter, cider, perry, and vinegar, in wood—per gallon				9d.
Ale, beer, porter, cider, perry, and vinegar, in bottle—for six reputed quart bottles				1s.
Ale, beer, porter, cider, perry, and vinegar, in bottle—for twelve reputed pint bottles				1s.
Tobacco and Snuff, lb.				2s. 6d.
Cigars—5s. lb. Opium, lb.				20s.
Coffee (roasted), and tea—lb.				6d.
Coffee (raw), chicory, cocoa, chocolate, lb.				4d.
Cocoa (raw)—lb. 2d. Molasses, cwt.				3s. 4d.
Sugar (refined)—cwt. 6s. 8d. Sugar (raw) cwt.				5s.
Rice, oatmeal, and maize meal—ton				40s.
Salt—ton, 40s. Butter—lb.				4d.
Cheese, bacon, hams, and hops—lb.				2d.
Soap (not including toilet soap)—cwt.				5s.
Potatoes, onions, hay, and chaff—ton				10s.
Wheat, barley, maize, oats, malt—bushel				6d.
Bran and pollard—bushel				2d.
Biscuits, maize, arrowroot, jams, jellies, dried fruits, and candles—lb.				1d.
Bottled fruit and pickles, reputed qrts.—doz.				1s.
Ditto, ditto, reputed pints—dozen				8d.
Bottled mustard, reputed pounds—dozen				1s.
Ditto, ditto, reputed half pounds—dozen				8d.
Coals—ton				1s. 6d.
Oils, mineral and other kinds, except perfumed oil, salad oil, castor oil—gallon				6d.

FREE ARTICLES.—Anchors and chain cables over $\frac{3}{4}$ of an inch in diameter, iron ore, plain sheet iron (not including galvanized), pig, bar, rod, scrap, and hoop iron; boiler plates, tin plates, block tin, sheet and pig lead, zinc, sheet copper, muntz metal, unwrought steel; gold, silver, and copper coin, and unmanufactured gold and silver; printed books and newspapers; live animals; manure, green fruit, garden seeds, and garden produce, bulbs, trees, shrubs, and flour; antique curiosities and specimens of natural history; outside packages in which goods are ordinarily imported, and which are of no commercial value, except as covering for goods; passengers' cabin furniture and baggage, and passengers' personal effects (not including vehicles, musical instruments, glassware, chinaware, silver and gold plate, and plated goods, and furniture other than cabin furniture), which are imported with, and by passengers *bona fide* for their own personal use and not imported for the purpose of sale; naval and military stores, stores imported for the service of the colonial Government, or for the use of the Her Majesty's land or sea forces, and wines and spirits for the use of His Excellency the Governor, or for naval and military officers employed on actual naval or military service and on full pay.

AD VALOREM DUTIES.—Upon all goods imported into the colony other than those mentioned in the foregoing, a duty of ten pounds for every one hundred pounds of the value thereof.

GOVERNMENT OF QUEENSLAND.

Governor.—His Excellency The Most Honorable the Marquis of Normanby, Governor and Commander-in-Chief of the Colony of Queensland and its Dependencies.
 Private Secretary.—Lieutenant Irwin Charles Maling. Aide-de-Camp.—Charles R. Smith, Esq.

EXECUTIVE COUNCIL.

President.—His Excellency the Governor.

Vice-President.—The Hon. Arthur Hunter Palmer, Colonial Secretary.

Members.—The Hon. Joshua Peter Bell, Treasurer; The Hon. William Henry Walsh, Minister for Works; The Hon. J. M. Thompson, Minister for Lands; The Hon. T. L. Murray Prior, Postmaster-General; The Hon. John Bramston, Attorney-General.

Clerk of the Executive Council.—Albert Victor Drury.

LEGISLATIVE COUNCIL.

President.—The Hon. Sir Maurice G. O'Connell. Clerk of the Council and Parliaments.—H. Johnson.
 Chairman of Committees.—The Hon. D. F. Roberts. Usher of the Black Rod.—F. R. C. Master.

Members.—The Hon. J. Bell, The Hon. F. E. Bigge, The Hon. E. I. C. Browne, The Hon. H. B. Fitz, The Hon. J. J. Galloway, The Hon. J. Gibbon, The Hon. G. Harris, The Hon. W. Hobbs, The Hon. L. Hope, The Hon. J. G. Heussler, The Hon. J. F. McDougall, The Hon. Sir M. C. O'Connell (Pres.), The Hon. T. L. Murray Prior, The Hon. D. F. Roberts, The Hon. H. G. Simpson, The Hon. W. Thornton, The Hon. C. B. Whish, The Hon. W. D. White, The Hon. W. Yaldwyn.

LEGISLATIVE ASSEMBLY.

Clerk of the Assembly.—L. A. Bernays

Sergeant-at-Arms.—E. B. Uhr.

Members.—*Brisbane (North)*—G. Edmondstone, K. I. O'Doherty, R. Pring. *Brisbane (South)*—T. B. Stephens. *Burnett*—J. Bramston, Hon. B. B. Moreton. *Clermont*—O. de Satgé. *East Moreton*—R. T. Atkin, H. Jordan. *Eastern Downs*—E. L. Thornton. *Fortitude Valley*—C. Lilley. *Ipswich*—R. Cribb, J. Johnson, J. M. Thompson. *Kennedy*—E. O'D. M'Devitt. *Leichhardt*—C. J. Roysds, J. Scott. *Maranoa*—W. Miles. *Maryborough*—W. H. Walsh. *Mitchell*—B. D. Morehead. *Northern Downs*—J. P. Bell. *Port Curtis*—A. H. Palmer. *Rockhampton*—A. Fyfe. *Toowoomba and Drayton*—W. H. Groom. *Warrego*—A. B. Buchanan. *West Moreton*—J. Ferrett, F. A. Forbes, G. Thorn. *Western Downs*—R. Ramsay, E. Wienholt. *Wide Bay*—H. E. King.

Librarian.—Rev. J. R. Moffatt, M.A. Shorthand Writers.—C. H. Barlee, L. J. Byrne, G. Lindsay.

DEPARTMENTS UNDER THE HON. THE COLONIAL SECRETARY.

Colonial Secretary.—The Hon. A. H. Palmer. Under Secretary.—H. H. Massie. Registrar-General and Master of Titles.—H. Scott. Deputy Registrar-General, and Registrar of Births, &c.—W. T. Blakeney. Board of Education.—Hon. A. H. Palmer, Chairman. General Inspector.—R. Macdonnell. Orphan Schools.—Diamantina (Protestant), St. Vincent's (Roman Catholic). Immigration Agent.—R. Gray. Clerk.—H. S. Martin. Police Commissioner.—D. T. Seymour. Inspector.—T. H. B. Barron. Colonial Storekeeper.—H. V. Hassell. Government Printer.—J. C. Beal. Chief Engraver, &c.—W. Knight. Lunatic Asylum.—Surgeon-Superintendent.—Dr. Challinor.

DEPARTMENTS UNDER THE HON. THE ATTORNEY-GENERAL.

Attorney-General.—The Hon. J. Bramston. Crown Solicitor.—R. Little. Chief Justice.—The Hon. Sir J. Cockle. Puisné Judge.—The Hon. A. J. P. Lutwyche. Registrar.—J. M. Shaw. Sheriff.—A. E. Halloran. Insolvent Court.—Chief Commissioner.—His Honor A. J. P. Lutwyche. Official Assignees.—A. Raff and W. H. Miskin.

DEPARTMENTS UNDER THE HON. THE COLONIAL TREASURER.

Treasurer.—The Hon. J. P. Bell. Under Sec.—W. L. G. Drew. Collector of Customs.—The Hon. W. Thornton. Chief Inspector of Distilleries.—F. O. Bryant. Marine Board.—Commander G. P. Heath, R.N., Chairman. Secretary.—A. J. Manson. Postmaster and Marine Surveyor.—G. P. Heath, Com. R.N. Shipping Master.—A. J. Manson.

DEPARTMENTS UNDER THE HON. THE SECRETARY FOR PUBLIC LANDS.

Secretary for Lands.—The Hon. J. M. Thompson. Under Secretary, and Chief Commissioner of Crown Lands.—W. A. Tully. Chief Clerk Public Lands.—Gresley Lukin. Chief Clerk Crown Lands.—G. B. N. Geary.

SURVEYOR-GENERAL.—A. C. Gregory. Botanic Gardens (open from 6 a.m. to 6 p.m.), Director.—W. Hill.

ACTING COMMISSIONERS OF CROWN LANDS.

East Moreton.—C. Coxen, Brisbane; *West Moreton*.—R. J. Smith, Ipswich; *Darling Downs*.—A. McDowall, Toowoomba; *Wide Bay and Burnett District*.—W. M. Davidson, Maryborough; *Port Curtis District*.—A. J. Richardson, Rockhampton; *Springure*.—The Police Magistrate; *Gympie*.—J. O'C. Bligh; *Gayndah*.—B. Cribb, Junr., P.M.; *Roma*.—H. R. Buttaushaw, P.M.; *Cardwell*.—B. G. Sheridan, P.M.; *Kennedy*.—J. P. Sharkey, P.M., Bowen; *Burke*.—F. Scarr, Normanton.

LAND AGENTS.—*Brisbane*.—T. K. Persse; *Becaligh*.—L. Chisholm; *Bowen*.—Henry Bramston; *Cardwell*.—G. B. Sheridan; *Charleville*.—P. Cardew; *Clermont*.—H. W. Cave; *Condamine*.—R. Vincent; *Dalby*.—C. Cumming; *Gayndah*.—B. Cribb, Junr.; *Gladstone*.—G. White; *Gympie*.—A. W. Compigne; *Ipswich*.—R. J. Smith; *Mackay*.—W. R. Goodall; *Maryborough*.—W. Reid Warner; *Rockhampton*.—C. Wodehouse; *Roma*.—H. R. Buttaushaw; *Springure*.—C. S. Dicken; *Townsville*.—T. C. N. Thistlethwaite; *Toowoomba*.—F. X. Heeney; *Warwick*.—M. O'Malley.

DEPARTMENTS UNDER THE HON. THE SECRETARY FOR WORKS.

Secretary for Works and Mines.—The Hon. W. H. Walsh. Under Secretary, and Commissioner of Railways.—A. O. Herbert. Board of Water Works.—The Hon. W. H. Walsh, Chairman. Secretary.—L. A. Bernays.

DEPARTMENT OF THE POSTMASTER.

Post Office.—Postmaster-General, The Hon. T. L. Murray Prior. Under Secretary.—J. M'Donnell. Chief Clerk and Cashier.—F. E. Salisbury. Superintendent.—W. J. Cracknell.

DEPARTMENT OF THE AUDITOR-GENERAL.

Auditor-General.—F. O. Darvall, Accountant.—J. C. Horstmann.

TOBACCO CULTIVATION.

The following hints are extracted from a valuable treatise on the subject, by MR. J. OWEN, of Melbourne

SEED BEDS.—For seed I recommend, Virginia and Kentucky for Tobacco manufacture ; Connecticut for Cigar making. The "Orinocoos" are the best seed for Kentucky variety, the Blue Prior and the Yellow Prior for Virginia. Raising Tobacco plants from seed is somewhat similar to raising cabbage plants, but they take more time to sprout, and will not stand weeding ; therefore have the bed free from all *all weed seeds*. In Virginia they choose a plot of good rich land, newly cleared, if possible in a dry sunny corner, sheltered from cold winds. A dry warm soil (loam or sandy loam), rich, deep, and containing lime, is most suitable for Tobacco. The more sandy to a certain degree the soil is, the better will be the quality of the Tobacco. Old or poor land must be *well manured* ; the land must be ploughed deep, ten to twelve inches, and harrowed thoroughly until it is as fine as garden soil. The seed-bed should be four feet wide and eight feet long (4 x 8,) to raise plants sufficient for each acre intended to be planted. On this they pile brushwood, logs, &c., sufficient to keep up a good fire for nearly a day, and burn it. When the coals begin to die out, or before the soil is cold, the bed is cleared off and only the fine ashes are left ; then it is hoed thoroughly, as deep as the strongest heat has penetrated, say a few inches, after which it is raked across and lengthwise until the soil is entirely pulverised. Everything that might hinder the growth of the plants is carefully removed. On this bed, when cool, a thimbleful of seed, well mixed with ashes or dry earth, is sown *broadcast* ; the ashes will enable the seed to be sown evenly. The above quantity is sufficient to raise plants for one acre. Then take a hand roller and roll the bed evenly, or place a board on one end of the bed, walk on it to press the ground to the seed, move it over and repeat this until the bed is all pressed over. Do not rake the seed in. After this, the bed is thoroughly wetted with weak manure water—twelve pounds of fowls' droppings in ten gallons of water—or pure water with finely powdered sheep manure, sowed over the bed ; or if these may not be at hand, with a weak solution of guano. Should weeds appear, they must be removed with the utmost care. Tobacco on its first appearance above the ground is a bright green colour, and lies very flat. The plants should stand about an inch apart, as it is evidently important to have the plants uniform in size, and as many of them as possible put out at the first planting. When this is the case, the topping, suckering and cutting can be done regularly ; but when planted at intervals of two or three weeks, all the subsequent operations come on irregularly. Seed should be sown from 1st July to 1st October.

TRANSPLANTING.—As soon as the seedlings are of the size of Cabbage plants—that is having four leaves, and being four to six inches high—they are ready for transplanting. The first thing is to lay out the land in lines with a one-horse plough. These lines are either furrows or ridges—according to whether there is little or much rain expected, or as the soil is more or less porous—the furrows give the young plants shade, and protect the soil from drought by sun, or winds ; the ridges absorb the sun and protect from dampness. In this respect the planter must be governed by experience. When all is ready for transplanting, watch must be kept for rain, or for one or two cloudy days. If the weather is favourable, the planter must lose no time, but go to work with all the hands at his disposal. After thoroughly wetting the seed bed, take a common two-pronged dinner fork, or a stick, sharpened to a flat point at one end ; run this down by the side of the largest sized plants (which should be always planted first,) with the other hand gather the leaves carefully, and gently lift them out of the ground, so that the roots will not be hurt, and the earth not disturbed around the remaining ones, and only take out as many as can be planted in a short time. As soon as taken up they are laid straight in a basket, and the roots covered, and transplanted at once. This is best done by having two persons to plant, one (a boy will do) to drop a plant at the requisite distance, the other to insert them in the soil. This latter is done by taking plants by the eaves, near the roots, in the left hand, and with a dibble, or with the hand, make a hole where the plant is to grow, by running the dibble down straight ; withdraw it, and place the roots of the plant, held in the other hand, in the hole, taking care that the roots are not doubled up, and with the dibble, push the dirt up to the side of the roots, finish off by pressing the dirt in and around the plant. Work the soil to keep it open to the influence of the atmosphere and to destroy the weeds ; experience has proved that only soil that is open and free from weeds will fully develop the plants. Loosening and stirring the soil from time to time is therefore not only beneficial, but necessary.

PRIMING.—Break off early the leaves that come out too near the ground, which, when large, lie flat on it, and, therefore, rot or get dusty. These leaves must not be torn off, especially not *downward*.

TOPPING.—This is done to throw the strength, which would go to develop seeds, into the leaves. It, therefore, must be done as early as the seed-buds show themselves. As a general rule, a plant just in blossom should be topped down to where the leaves are fully seven inches wide leaving on the stalk from twelve to fourteen leaves.

SUCKERING.—As soon as the top is broken off, the sap is thrown into the leaves, causing them to expand rapidly, and to cause, in about a week's time, an auxiliary branch to shoot out at the junction of the leaves to the stalk. These must be pinched off, or the growth of the leaves will be checked, as the sap will be thrown into these young sprouts.

CUTTING.—Remember that all the plants are to be hung after they are cut—hung on something and by something. Prepare a sharp knife ; enter it at top of the plant, where the top was broken off, enter it centrally, press it downwards, dividing the stalk into two equal portions till within five inches of the ground, lay it carefully on the ground, with the lower end towards the sun. After two hours, reverse it, that the other side may be exposed. Do not let it be burnt or blistered by the heat of sun.

DRYING SEEDS.—To give room to the free hanging up of the Tobacco, so that it is protected from the sun, wind and rain, and so constructed that free circulation of air can be procured when required.

HANGING.—The treatment of the plant during this operation depends upon what colour the planter wishes to secure. If he wants it bright yellow, he must "sun-cure"; if dark brown or chocolate, he must not expose it to the sun, but cart it from the field to the shed as soon it is properly wilted. These colours bring the highest price.

STRIPPING.—After the dry leaves have become damp enough to allow handling in any degree without breaking, the stalks must be taken off the sticks, and if there be not sufficient assistance at hand to strip the leaves at once, place them straight and compact in one corner of the shed, about one foot from either wall, butts outside round the pile, and when one layer is completed lay down another on top until the heap is about three feet high (any desired length), and cover it up with a tarpaulin, hay, or straw, to keep it moist enough to strip the leaves from the stalk without breaking. If not stripped in two or three days, and it begins to get warm in the centre, it should be opened out and stripped at once; or, if found to be getting dry and crisp, further evaporation may be checked by covering the heaps with damp straw or fodder. Stripping is performed by holding the plant, top down, with the left hand, while with the right hand the leaves are pulled off, taking care to have the stems all even in the hand, so that the ends are together; when twelve to fourteen leaves have thus been grasped by the right hand change the handful to the left hand, and with the right select a leaf (a small leaf will do) and wrap it round the stems at the thick end, so as to bind them together; then split the other leaves apart with the finger and draw the end of your wrapping leaf through, and you have a "hand" of Tobacco.

LAND OFFICES.

INFORMATION AT LAND OFFICES.—Instructions have been issued to the officers in charge to give every possible assistance gratuitously, to all person applying for land or seeking for information on matters connected with the working of the Land Act. This assistance is to extend even to the filling up of forms of applications, transfers, &c., for illiterate persons, if there is time at the officers disposal. Any land agent or other officer who shall appropriate fees for such clerical assistance to his own use, on the matter being reported, will be severely dealt with. For the convenience, however, of persons requiring copies of plans, arrangements have been made by which on application to the District Land Commissioner, and on payment of a fee to be estimated by that officer, a tracing or copy of the plan required, will be prepared and furnished to any person wanting the same.

DIRECTIONS FOR MAKING A WILL.

A Will cannot be made in language too simple or concise; it must be written with Ink, on paper or parchment, and if contained on one sheet, must be signed at the end by the testator, in the presence of two or more witnesses; and if written on more than one sheet, the testator and the witnesses had better sign each sheet.

The witnesses (b) must rigidly comply with every particular required by the Attestation Clause, at the end of which clause they must sign their names (c).

The signature of the testator must be acknowledged by him, in the presence of the witnesses; and in order that this may be properly done, he must (after having signed the Will), take it in his hand and say, "I acknowledge this to be my last Will and Testament, and request you to witness it." To avoid the evils of intestacy, the following form may suffice as a general guide; but others properly prepared for filling up and signing, with the various conditions hereinafter described, can generally be procured from respectable stationers.

WILL.—This is the last Will and Testament of me, _____ of _____ near _____ in the county of _____ After payment of my just debts, funeral and Testamentary expenses, I give, devise, and bequeath unto (a) _____ also to (b) _____ And to the residue and remainder (d) of all my real and personal Estate, I give, devise, and bequeath the same unto (c) _____ And I hereby appoint (c & c), or the survivor of them, and (c) _____ Executors of this Will, as witness my hand this _____ day of _____ 18 _____

ATTESTATION.—Signed and acknowledged by the said _____ the Testator, as and for his last Will and Testament, in the presence of us, being present at _____ the same time, who at his request, in his presence, and in the presence of each _____ other, have hereunto subscribed our names as witnesses.

A Codicil to a Will is to be made with the same regulations as the Will itself, and may be written thus:—

This is a Codicil to my last Will and Testament, bearing date the _____ day of _____ 18 _____ and which I direct be taken as part thereof. I give, devise, and bequeath, &c. As witness my hand this _____ day of _____

Alterations ought, to be avoided; but when made, ought to be signed by the Testator and Witnesses near to alterations, and specially noticed in the Attestation Clause as made before the Will was signed.

Marriage after making a Will renders the Will void. If a person wish to dispose of all his property in one gift, the words "all my real and personal estate" may be used. It is not indispensable for a Witness to know the contents of a Will, which may be so folded as to prevent any other part than the signature and Attestation Clause being read.

It may be useful to remark that Personal Property left without a Will is divisible as under. If the deceased leave Children and no Widow, the whole property is to be divided equally among the Children. If he leave a Widow and Child or Children, the former is entitled to one-third,† and the latter to the remaining two-thirds. If he leave a Widow and no Child, the former is entitled to half and the next of Kin to the remainder, as follow:—A Father, the whole amount. If no Father, a Mother, Brothers and Sisters, or their issue, equal portions. If none, Uncles, Aunts, Nephews, and Nieces, equal portions, &c.

(b) These must be parties not interested in the Will, or their claim to such interest becomes forfeited.
(c) In all cases where a name is given it is necessary to describe clearly and fully the Christian name, surname, residence, and trade or profession, &c.

(d) The Residue becomes the Property of the next of Kin, unless otherwise provided for.

DIRECTIONS TO COLLECTORS OF PRECIOUS STONES.—1. Procure a small driving pick suitable for breaking stones and disturbing gravel deposits and drift;—the handle should be detached for the sake of convenient transit; also, a well tempered knife, from 7 in hardness downwards; a pocket magnifying glass, and a velise or bag for holding specimens. 2. The relative hardness of different kinds of stones should be understood. The following will be found suggestive:—Quartz crystal, 7 in hardness; garnet, zircon, &c., 7½; agate, jasper, chalcedony, and topaz, 7½ to 8, including zircon, beryl, or emerald; sapphire, ruby, or corundum, 9; diamond, 10. Interesting specimens are found from 7 to 5½, such as opal and chrysolite. A diamond is the hardest substance in nature, though it is easily crushed by a small blow with a hammer, as is too generally thought impossible, from the fact of people confounding "hardness" with "toughness". Consequently, if a

person can, with his suspected gem, scratch a piece of quartz (which is the fourth degree of hardness below a diamond) he may rely upon having found a precious stone at least, if not a diamond; and if he possesses a blue, white, or green sapphire, which the stranger can also scratch, he may rest assured that he has found a diamond, because a sapphire is the next hardest substance known to science. 3. The habit of close observation should be sedulously cultivated. On picking up a stone, rub off any earthy particles, and apply the tip of the tongue, as the colour may reveal agate, chalcedony, jasper, &c.; then bag it for home inspection. Some pebbles are covered with a kind of net-work, and the grindstone sometimes brings to light indications worth following up. 4. Examine the beds of creeks, the fissures of rocks, recently disturbed banks, marlaceous beds, landslips, &c. The pocket-glass should always be carried, especially when among creeks trending from high grounds, as diamonds are found in various localities.

WEIGHT OF MINERALS.—According to Feuchtwanger, it is known that 1,728 inches comprise one cubic foot, and that one cubic foot of water weighs, at a temperature of 60° Fahrenheit, 62½ lbs. avor. By ascertaining the specific gravity of, say lead, copper, or iron, and multiplying with 62½ lbs., the exact weight of one cubic foot of these ores is obtained; it may also be easily ascertained how many cubic feet are contained in a ton of many substances; for instance, it is known that one ton of sand contains 23½ cubic feet, and a ton of marble or granite 10½ cubic feet: and by these means we can also find out the capacity of certain mineral lands. It may be added, for convenience of calculation, 27 cubic feet are equal to a cubic yard, and that 40 cubic feet of articles nearly equal to the specific gravity of water are equal to one ton; while one ton of marble is equal to 15·07 cubic feet; granite, 13·05; sand, 23·05; brick, 17 cubic feet. Galena, the common sulphuret of lead, used to produce pig lead, &c., has a specific gravity of 7·5, and a cubic foot weighs 465 lbs.

GOLD.—Specific gravity (20 carats), 15.7 up to (pure) 19.2; and the average weight of a cubic foot, 1,000 to 1,200 lbs. Iron—cast iron—a cubic foot weighs 450 lbs. Mountain copper, or malachite, or green carbonate of copper (an ornamental stone from Siberia, Australia, and United States), has a specific gravity of 4.0, and a cubic foot weighs 248 lbs. Quartz—The pure quartz, if compact, has a specific gravity of 2.6, and a cubic foot weighs 155 lbs.

TO FIND THE WEIGHT OF HAY CONTAINED IN A STACK.—Multiply the length of the stack by the breadth, and multiply the result by its height, all in feet; divide the total by 27, which will give the number of square yards; this multiply by 6, 8, or 9, according to the age of the hay (6 stones of new hay, 8 stones of oldish hay, and 9 stones of old hay go to a square yard), and the product will be the weight in stones. In measuring the height allow off one-half of the amount of feet from the eaves to the top. Thus:—say a stack is 30 feet long, and 20 broad, this multiplied, is 600 feet, the height to the eaves 8 feet, from the eaves to the top 3 feet; take of this last 1½, and add it to the 8=9½, then multiply 600 by 9½=5,700; then 5,700 divided by 27 gives 211 square yards, and 200 multiplied by 6, makes 1,200 stones of new hay.

PRICE, 4s

WITH MAP, 5s.

THIS publication (which has now been brought out annually since the year 1859), is admitted by the press of Australia and the mother country to be one of the best of the kind published in the British Dominions. In the Colony itself it is the

ONLY ACKNOWLEDGED WORK OF REFERENCE

on local subjects, and enjoys a large circulation in every district; while in the neighbouring colonies and Great Britain it has secured for itself a wide reputation.

PRITCHARD'S UNRIVALLED LUBRICATOR.

THE Inventor and Sole Manufacturer of this Unrivalled GREASE, begs to inform the Public, that this is the only kind now used on the Government Railways. That it was tested against Sir WILLIAM ROSE's Prize Gold Medal Grease, and consumed only 1lb against 7lbs. of the latter, doing its work with perfect efficiency. On the Hobson's Bay Railway,

One Pound and a Half supplied an Axle running a distance of over 17,000 Miles, and lasting 4½ Months.

That it is giving satisfaction to the Owners of Buggies, Cabs, Machinery, &c, is evident by the Testimonials received. Copies of a few selected out of some scores that have been sent to the Proprietor, can be had of the Agent.

With such Testimonials, and the fact that the supply to the Victorian Railways, is solely of this Grease, the Proprietor feels quite satisfied that the Public have only to be made acquainted with its good qualities, to cause it to become a permanent article of commerce.

Sold in Tins at 1s. 9d. each; 14 lb Tins, 20s. each; 28 lb Tins, 35s. each; Half Cwt. Kegs, 60s. each; 1 Cwt. Casks, £5 5s. each; Quarter Ton Casks, £22 10s.; Half Tons, £40; Per Ton, £70. Tins, Kegs, and Casks, Free.

Tuckerman's The Collector, Essays	7s. 6d.

WEALE'S SCIENTIFIC BOOKS.

(The figures at the end of each title denotes the number in the series.)

Acoustics, T. Roger Smith, 116	2s.
Agricultural Engineering, Andrews, 63... ..	3s. 6d.
Algebra, by Haddon, 86, Key 2s.	2s. 6d.
Algebra, Geometry, and Trigonometry,	
by Kirkland, 105	2s.
Arches, Piers, Buttresses, &c., Bland 111	
Architecture for Beginners, by Leeds, 16	
Civil, Military, and Naval, Vitruvius, 128	
Modelling in, by Richardson, 127	2s.
Principles of Design, Garbett, 18	2s. 6d.
Styles of, by Bury, 17	2s.
Arithmetic, by Haddon, 136 and Key each	
2s.	
Astronomy, Rudimentary, by Main, 96 ...	1s. 6d.
Blasting and Quarrying, by Burgoyne, 35	
Book-keeping, by Haddon, 83	1s. 6d.
Brassfounder's Manual, by Graham, 162	
Erick and Tile Making, by Dobson, 23 ...	2s. 6d.
Bridges, Tubular and other Iron Girder,	
by Dempsey, 43	2s.
Building, Art of, by Dobson, 22	1s. 6d.
Carpentry and Joinery, by Robison and	
Tredgold, 123	2s.
Ditto, Atlas of Engravings to, 123*, 4to. 5s.	6d.
Chemistry, Rudimentary, by Fownes, 1 ...	1s. 6d.
Chronology of History, Art, Literature, 9	
Civil Engineering for Beginners, 13	5s. 6d.
Ditto, in North America, Stevenson, 118	
Clay Lands and Loamy, by Donaldson, 66	
1s. 6d.	
Clock and Watchmaking, by Denison, 67	
4s.	
Coal Combustion & Smoke Prevention, 125	
3s. 6d.	
Cottage Building, by Allen, 42	1s. 6d.
Cranes and Machinery Construction, by	
Glynn, 33	1s. 6d.
Dictionary of Terms, for Architects, &c., 36	
4s. 6d.	
Domestic Medicine, by Gooding, 112 ...	2s. 6d.
Drainage and Sewage of Towns and Build-	
ings, by Dempsey, 30	2s. 6d.
Ditto, Districts and Lands, by Dempsey 29	
1s. 6d.	
Dwelling Houses, Erection of, Brooks, 132	
3s.	
Electric Telegraph, Highton, 11	2s. 6d.
" Handbook, by Bond, 138	1s. 6d.

Twain's Innocents Abroad, 7s. 6d., Jumping	
Frog	1s. 6d.
Taylor's Primitive Culture and Researches into	
Development, 2 vols.	32s. 6d.
Tyndall on Heat, 15s. 6d., on Sound, 11s. 6d.,	
Use of the Imagination	4s.
Tytler's History of Scotland, 4 vols. ...	20s.
Tytlers, Sarah, Citizeness Jacqueline, Days of	
Yore, Girlhood and Womanhood, Papers of	
Thoughtful Girls, The Diamond Rose, each, 6s.	
6d., The Huguenot Family	7s. 6d.
